

BCM360.275-CORE

Software Update Name: BCM_360.275_CORE.08.0625

Applicable H/W Platforms: BCM1000, BCM200, BCM400

Applicable S/W Platforms: BCM 3.6, SRG 1.0 on BCM 3.6

Category: GEN

Recommendation: Non-critical. For all systems using PRI with MCDN protocol. When using Voice Over IP trunks, latest BCM_360.276_FEPS.33.371800 patch must also be installed.

Component & Version: 3.6 core wi06.25

Dependencies: BCM_360.276_FEPS.33.371800 or latest release

Product Dependencies: None.

Size: 16 MB

System Impact: Patch application takes about 25 minutes including 2 reboots.

Limitations: None

Patch Removable: No

The following issues are addressed:

- o Q1246753-01: Incoming call to IP set via PRI trunk can occasionally result in no speech path.
- o Q01287657: QSIG -- Overlap receiving prompt display The prompt for overlap receiving is not present when the QSIG PRI protocol is selected. It should be visible.
- o Q01094224-03: This solution corrects a PRI NI-2 specification issue which may result in the calling party not hearing ringback on tandemed calls.
- o Q01284456-01: When privacy control is turned off on lines and set B tries to pick up a held call from set A, speechpath on set A's active call can be lost.
- o Q01120093: VoIP lines go to busy state. This resolves an issue where outgoing calls which were released before the far end answers causes a VoIP trunk to lock up. The root cause lies with the VoIP trunk release protocol. The following patch is also required as part of this solution: BCM_360.276_FEPS.33.371800 or higher

Plus all fixes in previous core patches:
