

Software Update Name: BCM050.081-SOFTWARE-MANAGEMENT

Applicable H/W Platforms: BCM50, BCM50a, BCM50e

Applicable S/W Platforms: 1.00.2.04g or 1.00.2.04j

Category: GEN

Installation Recommendations: Not urgent. This patch allows multi-component patches to be successfully applied where one or more patch components is older (earlier version) than the corresponding component on the BCM50. Apply this patch in the next maintenance window, before applying any other patches.

Component & Version: software-management 2.43.0-1

Dependencies: Required patches - None
Product Dependencies - None

Size: 40KB

System Impact: time to apply approximately 1 minute
Does patch application force reboot: no
Other - None.

Limitations: None

Patch Removable: Yes

Description:

The following issues are addressed:

1. More robust multi-package patches.

Allow a patch to be applied even if some component package of that patch is superseded by the version of that component on the BCM. Previously this condition would cause a patch to fail.

2. Unable to apply patches via FTP

In some instances, patches being applied via an FTP server would fail. This occurs when the FTP server is configured to perform reverse-DNS lookup on incoming requests, and where the BCM being patched is not known to the domain name server.

Q01203639

This patch includes the content of the following superseded patches:
No previous patches.
