General Pricing Policies and Procedures

General pricing policies

The Nortel Networks U.S. Enterprise Networks Product Catalog is provided to authorized distributors of Nortel Networks products as the prime source of pricing and ordering policy information. The intention of this catalog is to provide the information required for distributors to successfully execute orders.

Nortel Networks shall provide distributors with a reasonable number of product catalogs. **Each product catalog is considered proprietary and remains the property of Nortel Networks, even though it is provided on a "loaned" basis to the distributor.** Upon termination of agreements between Nortel Networks and distributors, distributors shall promptly return all product catalogs to**:**

> **Nortel Networks**
> **MSL-100 Pricing Operations**
> **P.O. Box 833805, MS: 468/04/B30**
> **Richardson, TX 75083-3805**

This product catalog supports Meridian SL-100.

> *Note:* All references to "days" within this product catalog are in terms of business days and exclude weekends and holidays.

1999 Nortel Networks holiday schedule

Date	Holiday
January 1	New Year's Day
May 31	Memorial Day
July 5	Independence Day
September 6	Labor Day
November 25 & 26	Thanksgiving
December 27-31	Christmas

For more information on Nortel Networks, see the Nortel Networks internet site at www.nortelnetworks.com.

Pricing data

Nortel Networks issues price updates through this product catalog. Any prices obtained from the automated pricing tools or included in purchase orders (POs), bulletins, or presentations do not govern or subordinate the prices contained in this catalog. If there is a conflict, the prices in this catalog will be used.

The pricing sections in this catalog include product pricing, as well as repair pricing, support and service fees, licensing and transaction fees, plus Standard Price Items. The product prices listed are Commercial List Prices (CLP).

Distributor Discounts

Product prices can be discounted; service fees, licensing fees, transaction fees, standard price items, and freight prices cannot.

Each Nortel Networks authorized distributor of Enterprise Networks products is granted a Distributor Category Discount. Distributor Category Discounts are shown below:

- I = 50%
- D = 30%
- M = 20%
- H = 0%

  Note: Discounts do not apply to special distribution programs.

Distributor Discounts are applied to each product's Commercial List Price (CLP). The resulting price from application of the Distributor Discount is the Gross Distributor Price (GDP). Other discounts may be applied to GDP to arrive at Net Distributor Price (NDP).

Gross Distributor Price / Net Distributor Price calculation

The following table shows how GDP and NDP are calculated for initial systems, extensions and merchandise:

How GDP and NDP are calculated

Commercial List Price (CLP)
less
Distributor Discount
equals
Gross Distributor Price (GDP)
less
Other Discounts (% or $)   **{e.g., Product Discount,**   **Volume Purchase Plan (Note 1),**   **marketing program discount}**   **(Note 2)**
equals
Net Distributor Price (NDP)

Note 1: See Tables 1-1 and 1-2.

Note 2: Discounts are additive.

- Extended Service Plans (ESPs)

Standard price item

A standard price item is any merchandise or service, other than hardware or software offered to distributors, under the Distributorship Agreement (e.g., MSL-100 Configurator, training, collaterals, technical support, and Technical Assistance Services [TAS]).

Software licenses and RTU fees

Nortel Networks offers the End User a license granting the Right To Use (RTU) of software.

The Nortel Networks CPE Distributorship Agreement provides that Nortel Networks software shall be licensed by distributors in exchange for a RTU fee. The RTU fee entitles and obligates an end user, as Nortel Networks' agent, to the Meridian Software License provisions. Distributors have the right to charge end users for such license.

Software is registered via the Hardware/Software registration form. This form must be submitted to TAS within ten (10) days of customer cutover, upon any system change or change of maintenance.

Old software media must be returned within forty-five (45) days of replacement media shipment from Santa Clara, Nashville, or RTP; otherwise applicable software RTU fees will be invoiced.

When a system is upgraded and/or the software is updated, and the existing software media are returned to Nortel Networks, the one fee/one system relationship is maintained and the value of all RTU fees on the former system are transferred at existing price levels to the new system.

Order placement

Each order transaction type requires distributors to contact the appropriate MSL-100 group to successfully process an order. All Commercial MSL-100 orders should be delivered to the following address:

Mailing address

> **Nortel Networks**
> **MSL-100**
> **P.O. Box 833858**
> **Richardson, TX 75082-3858**
> **Attn: Mail Stop 991-12-B50, MSL-100**
> **FAX: (972) 684-3991**

Shipping address

> **Nortel Networks**
> **2221 Lakeside Blvd.**
> **Richardson, TX 75082-4399**
> **Attn: Mail Stop 991-12-B50, MSL-100**
> **Contracts & Sales Administration**
> **FAX: (972) 684-3991**
> **TEL (972) 684-2847**

MSL-100 Federal orders should be placed through your designated federal contract administrator, or the address shown in the How to Place MSL-100 Orders section in front of the price manual.

Distributor purchase orders for all new hardware/software and documentation must be for a minimum amount of $100.00. On any regular sales order of less than $100.00, a $75.00 handling fee will apply PMI# 31431. The PMI# 31431 code must appear on distributor's Purchase Order. All Purchase Orders must match the final quote in order for Nortel Networks to accept the order.

Order acknowledgement

Nortel Networks may acknowledge order acceptance via verbal communication, written notification and/or electronically. Order acknowledgment includes ship date, content, and official pricing.

Order cancellation and restocking policy

Requests for order cancellation may be considered for credit at the original purchase price for return of unused products subject to the applicable restocking/cancellation charges based on the following time frames:

Order Type	After P.O./ before C.I.	After C.I./ before delivery	After delivery/ before cutover	After cutover (Note 1)
Initial Systems (Note 2)	10%	25%	35%	100%
Software (Note 2)	10%	25%	100%	100%
Extensions/ Upgrades	15% (Note 3)	15%	35%	100%
Merchandise	10% (Note 3)	10%	100%	100%
Labor	10%	10%	25%	100%

Note 1: After Cutover, Class "A" stock becomes classified as "B" stock and is, therefore, not eligible for credit.

Note 2: Software is subject to separate cancellation charges as noted (on both initial Systems and Extensions).

Note 3: Customer Information (CI) meetings are not normally required on extensions. The cancellation fees after Purchase Order receipt, but before delivery is 15% for Extensions. Likewise, cancellation fees after Purchase Order, but before delivery of merchandise is 10% for systems.

The distributor may also be 100% liable for the price of any hardware unique to the customer's order, provided that such hardware cannot be applied to other customer orders within six (6) months from the notice of such cancellation.

Note: See also "Job Change Order Process" in this section.

Definitions

System

A Meridian SL-100 System is defined as a new Cabinet or Supernode, which includes a core module containing the CPU, memory, network and I.O.D. interfaces. Auxiliary module additions can be made to the core module, which include providing power, mass storage, and peripheral equipment.

Extension

A MSL-100 Extension is defined as any addition to a MSL-100 switch that is in-service at the time the work is performed, and which requires engineering or installation labor. With certain exceptions, the typical Extension extends the wired-for capacity of the system. Examples of an Extension are as follows:

- Host Line Expansion

- LCM Addition

- BCS/MSL Upgrades

- ISDN Retrofit

- Upgrade of existing NT40 to Supernode

Merchandise

Any additional MSL-100 equipment, which does NOT require labor, is classified as Merchandise and is priced at merchandise level pricing.

Nortel Networks ships merchandise products FOB (Freight on Board) factory of origin. Hardware title passes to distributors and acceptance occurs when Nortel Networks surrenders possession to the common carrier, or, if Nortel Networks is acting as carrier, upon departure from the loading dock.

Nortel Networks prepays the common carrier and invoices distributors for all merchandise shipping charges. Standard shipping method is "best way" surface freight, unless distributors specify air or other commercially available shipping method; Nortel Networks invoices freight accordingly.

Examples of merchandise are: line cards, station sets and spare parts.

Materials and labor

The materials and labor offered in a proposal include only those materials and/ or activities that are offered by Nortel Networks as stated in the Distributor Agreement. Further materials and/or activities may be required by the Distributor.

Outside plant and station cabling

Outside plant and station cabling is normally provided by the FAC or BOC. Nortel Networks' responsibility, unless otherwise contracted for, terminates at the switch (horizontal) side of the MDF and at the DSXO panel.

Warranty

NT Material

The warranty period for Nortel Networks Material shall be a period of fifteen months from the date of shipment to Distributor, or for a period of twelve months from the date such Hardware is first placed in service with an End-User, whichever period expires first, unless a shorter period is specified in this Product Catalog.

Software

Software is warranted by Nortel Networks as follows: Provided such Software is not altered by Distributor, there shall be, during the warranty period no failure of such Software to function as specified in the applicable NTPs, which failure shall materially affect use by an End-User of the Designated Hardware system for which such Software was licensed. The warranty period for all such Software ordered as part of a system order shall be a period of fifteen months from the date of shipment to Distributor or a period of twelve months from the date the Software is first placed in service with an End-User, whichever period expires first. The warranty period for all such Software ordered as "Extended Software" to be added to an existing system shall be a period of one year from the date the software is placed in service or end of initial switch warranty, whichever is later. The addition of Extended Software to a system shall not extend the warranty period on any previously ordered or installed Software of that system.

> *Note 1:* Warranty does NOT cover Moves and Changes, or warranty on labor.

> *Note 2:* Warranty period for proprietary sets will be subject to additional terms and conditions as noted in the applicable Product Discount or Volume Purchase Plan.

Training

Distributors must complete all training courses included in the Contract Price prior to the expiration of the specified warranty period for Hardware. In the event such training courses are not completed within this time frame, Nortel Networks shall be relieved of its obligation to provide such training (including delivery of any associated educational material), and the price for such training will not be credited back to the Distributor.

Federal pricing policy

In the event the Federal Government is the actual end-user/purchaser, and the Federal Acquisition Regulations are applicable to Nortel Networks' price proposal/ contract or contract modification (including Job Change Orders), Nortel Networks reserves the right to price all labor, vendor items and other direct costs (i.e., travel & living expenses) in accordance with the Federal Acquisition Regulation proposal pricing requirements.

Other pricing policies
Cable and miscellaneous
Nortel Networks MSL-100 charges 1% of hardware price (CLP) in new systems and 3% of hardware price (CLP) on extensions (product category "1" hardware) for cables and miscellaneous equipment. These charges are to cover unidentified miscellaneous equipment and cable not specified in the job (exclusive of Product Category 2 hardware).

Overseas freight and travel and living
The following freight and travel living expenses apply:

Freight
To allow for the additional and variable expenses associated with overseas freight costs, MSL-100's policy for freight expenses is to provide a quote based on material weight, location and method of shipment on a per-job basis.

Travel & Living
Travel and living will be based upon Nortel Networks' Travel Policy, taking into account any applicable Federal joint travel regulations associated with Government contracts.

Product availability
During the product life, it may become necessary for Nortel Networks to limit product availability. The following product statuses indicate product availability:

Product Status	Definition
Controlled release	Product available on limited basis only. Distributors must secure controlled release approval from product management prior to order acceptance.
New system sale	Product available with new system sales only.
Additions & maintenance	Product available for installed base sales only.
Manufacture discontinued	Product is no longer manufactured or offered by Nortel Networks as "A" class material but is available for repair if it is a repairable item.

Nortel Networks shall provide, at Gross Distributor Price, functionally equivalent repair hardware and/or software to support distributor's installed base for the product support period specified by the contract annex or new product bulletin. This support continues from the date the product is manufacture retired unless otherwise specified.

Product availability (of products manufactured by third parties)
During the life of these products, their manufacturer(s) may retire the product(s). Nortel Networks makes no guarantee as to the availability of any of these

products, whether for new system sales or for installed base sales, or whether the product or products are available in the U.S. market. However, these products are available for repair if they are repairable items.

Controlled release policy/procedure

Nortel Networks reserves the right to release product and/or product improvements under the controlled release program and to allocate such product to distributors as best suits the needs of Nortel Networks' product development and testing programs.

To purchase products offered as controlled release, distributors must submit a Controlled Release Application (CRA) inclusive of desired delivery schedule and a site profile (if applicable) to MSL-100 Marketing Operations.

Completed controlled release applications and applicable site product files should be sent to the following address:

> **Nortel Networks**
> **MSL-100 Commercial Pricing**
> **2100 Lakeside Blvd. (468/04/B30)**
> **Richardson, TX 75083-3805**
> **FAX# (972) 684-1965**

Written acceptance/rejection of controlled release applications will be sent to the originator from MSL-100 Marketing Operations within approximately ten (10) business days of receipt of the application.

> *Note:* Standard shipment lead-times do not apply to products on controlled release. The following leadtimes apply instead:

- Controlled release items will be differentiated as backorders by MSL-100 Marketing Operations upon order acknowledgment.

- Standard shipment lead times for controlled release items will be provided on a per quote basis.

- Contact your Sales Representative for the Controlled Release Application and specific dates on controlled release items.

This page was intentionally left blank.

Job Change Order Process

A "Job Change Order" (JCO) is the vehicle utilized to process any additions and deletions of Meridian SL-100 material, software and services required for the applicable job/contract. JCOs are also used to document a change in the originally contracted milestone dates.

Preparation

It is the overall responsibility of the Nortel Networks Program Manager to prepare and submit the JCO to the MSL-100 Division. The Divisional Project Manager is responsible for interpreting the customer's requirements, interfacing with the Engineering Department for system configuration, coordinating installation and commissioning efforts, and developing system milestones.

Pricing policies

The MSL-100 Pricing Department will provide pricing detail for all MSL-100 JCO products and services, and must approve pricing on all JCO worksheets.

JCO pricing levels

These pricing levels are effective for all jobs booked after July 25, 1994.

Initial System

- "At CI": JCOs initiated before or at Customer Information (CI) are priced at CLP less the Distributor Discount less the Product/VPP discount. The ***original market adjustment discount, if any, will also be included, provided that the net CI price change does NOT exceed five percent (5%) of the *original purchase price (i.e., the net pricing effect with market adjustment discount applied does not exceed plus or minus $5,000 on a $100,000 original order value).**

  Note: "Original" market adjustment discount and purchase price may be located in the applicable b-form booked at the purchase amount (excluding optional items) per the Distributor's purchase order.

- From CI to Delivery (D): All JCOs processed after CI and up to D are priced at CLP less Distributor Discount less Product/VPP discount.

- Beyond Delivery: All additional material and labor required after D are priced at CLP less Distributor Discount.

Extensions

- "At CI": JCOs initiated before or at Customer Information (CI) are priced at CLP less the Distributor Discount less the Product/VPP discount.

- From CI to Delivery (D): All JCOs processed after CI and up to D are priced at CLP less Distributor Discount less the Product/VPP discount.

- Beyond Delivery: All additional material and labor required after D are priced at CLP less Distributor Discount.

Pricing policy notes

Discounts

Market Program Discounts apply to the entire order (excluding labor) and are not allocated on a piece part basis.

Deletions/Credits

Each JCO is considered to be an order and is, therefore, subject to the applicable cancellation/restocking fees as noted earlier in this section on page 2-13.

"No Charge" JCOs

A notation that charges are being waived (with justification) may be noted on the JCO Worksheet. All pricing must be calculated and recorded on the form before approvals are obtained for the waiver.

JCO approvals

All JCOs must be signed by the Senior Managers of Program Management and Pricing, in addition to the proper approvals as noted below:

Approval level	Net Debit Amount	Net Credit Amount
V.P., MSL-100	over $500,000	over $250,000

Note: The following **exceptions** require additional review/approval as noted:

- JCOs with change in payment terms - V.P., MSL-100

- JCOs with "No Charge" transactions -Senior Manager, MSL-100 Pricing

- JCOs which exceed the deletion amount, as specified in the change/ deletion clause of the Installation Subcontract Agreement - V.P., MSL-100

Time limit

JCOs may only be implemented if the specifications and the material for the change can arrive on-site before K-6 weeks. A purchase order, a customer signed JCO, or an Authority To Proceed letter from the Nortel Networks Director of Program Management (or his designate) is sufficient to begin engineering and material procurement activities.

The cutoff date for origination of JCO transactions (through customer signature) is determined by the Firm Configuration Date, or K-8 weeks, whichever is later.

B-Form revisions

A revised B-form may be requested by the Nortel Networks Program Manager for any single JCO or net cumulative JCOs which impact the contract/job value as contained in the latest B-form by +/- 5%, or any single JCO with a net price in excess of $100,000.

Customer signature

All JCOs require customer signature or a customer Purchase Order. The customer has fifteen (15) business days from the date on the JCO to reply. Nortel Networks has the right to withdraw the proposed JCO if not accepted within that time frame. It is imperative that JCOs be correct and have all approvals prior to presentation to the customer for signature.

Engineering Labor Rates

The major components of Nortel Networks' MSL-100 engineering services are:

Component	Description
System Engineering	Diagrams of frames, shelves, circuits, and card placements.
Database Engineering	Build software load.
Transmission Engineering	Design interface between switch and telco circuits — types of circuits and channel bank design.
Optional Election	Installation engineering: design of cable racks and cable runs, layout of frames, power, channel banks, alarms, bells, and whistles. This function also includes: provisioning of switch and power room layouts, and provides site-specific drawings of floor plans.

Engineering Labor Pricing

Cost at Commercial List Price Per Hour	Description
$147	System and Extension Level labor rate for Engineering during normal business hours (defined as 8:00 AM - 5:00 PM, Central Time, Monday-Friday)
$222	Overtime rate for work performed outside normal business hours
$294	Work performed on Sundays and Nortel Networks Holidays

Note: Site travel and living expense is an additional charge.

Engineering applicable PMI PEC codes

Part Number	Description
7258	MSL-100 Co-Agency Engineering
7820	MSL-100 Switch Install Engineering
7823	MSL-100 Switch Customer Engineering
7824	MSL-100 Switch Equipment Engineering
7825	MSL-100 Switch DBase Engineering
7829	MSL-100 Switch Interface Engineering
7845	MSL-100 MDF Engineering
7854	MSL-100 Power Plant Engineering
7958	MSL-100 Channel Bank Engineering
8668	MSL-100 Meridian Mail Customer Engineering
8670	MSL-100 Meridian Mail Install Engineering
8671	MSL-100 Meridian Mail Equip Engineering
8736	MSL-100 Meridian Mail DBase Engineering
30037	MSL-100 CSU Engineering

Travel & Living (T&L)

Part Number	Description	Duration
7821	Switch Install Engineering T&L	3 days
7826	Switch DBase Engineering T&L	3 days
7830	Switch Interface Engineering T&L	3 days
8656	Meridian Mail Engineering T&L	3 days

Installation & Commissioning Labor Rates

Typical duties performed by the Installation & Commissioning function are described as follows:

- Mark and drill floor for system bays as shown on floor layout plan.

- Install and level system frames.

- Install troughs or cable ladder as specified on layout drawings.

- Connect system power, digital and analog cables.

- Terminate all digital cables at the DSX and all voice frequency cables on connectorized terminal blocks; all cables will be direct runs, and laced in place.

- Install AC wiring and lighting within the system from power distribution panel; provide AC outlets in the first and last bay of each equipment lineup.

- Perform power verifications test and commissioning on system.

- Install and test all cabling from the equipment mounted in the Nortel Networks-furnished main distribution frame.

- Install and test the power cable between the power board and the PDC frame.

- Install and test the attendant consoles.

Installation and commissioning labor pricing

Cost at Commercial List Price Per Hour	Description
$132	System and Extension Level labor rate for Installation & Commissioning during normal business hours (defined as 8:00 AM - 5:00 PM, Central Time, Monday-Friday)
$198	Overtime rate for work performed outside normal business hours
$264	Work performed on Sundays and Nortel Networks Holidays
$88	Subcontract labor rate for Installation & Commissioning

Note: Site travel and living expense is an additional charge.

Installation and commissioning PMI PEC codes

The following PMI PEC codes apply:

NT MSL-100 labor

Part Number	Description
6117	System Support Trunk I/F
6118	Cutover Implementation
6776	System Support (Switch)
7835	Switch Testing
7836	Switch Transmission I&C
7838	Oper Planning
7855	Power Plant I&C
7959	Channel Banks I&C
7962	CSU I&C
7973	Maintenance Qualification I&C
7983	Ext Preset Conf
8657	Meridian Mail I&C

Subcontract labor

Part Number	Description
7834	Switch Installation Subcontract
7837	Switch Trans. I&C Subcontract
7856	Power Plant I&C Subcontract
7960	Channel Banks I&C Subcontract
7981	Cross Connect Subcontract
7984	Ext. Preset Conf. I&C Subcontract

Travel & Living (T&L)

Part Number	Description	Duration
6779	System Support (Switch) T&L	5 days
6780	Sys. Support (Telco Trk. I/F) T&L	5 days
7056	MSL-100 Training T&L	3 days
7844	Cutover Implementation T&L	5 days
7832	Switch I&C T&L	5 days
7857	Power Plant I&C T&L	5 days
7961	Channel Banks I&C T&L	5 days
7963	CSU I&C T&L	5 days
7974	Maintenance Qualification I&C T&L	5 days
8658	Meridian Mail I&C T&L	5 days

This page was intentionally left blank.

Program Management Labor Rates

A Program Manager has the responsibility of ensuring the timely support of all operational departments in the fulfillment of obligations to the customer. The Program Manager acts as the single point of contact for the customer, conducting regularly scheduled project review meetings to include, but not limited to, the following:

- Progress toward project implementation schedule.

- Identify key issues and/or impacts.

- Report status of existing key issues.

- Discuss status/efforts of requested Job Change Orders.

Program management labor pricing

Cost at Commercial List Price Per Hour	Description
$154	System and Extension Level labor rate for Program Management during normal business hours (defined as 8:00 AM - 5:00 PM, Central Time, Monday-Friday)
$231	Overtime rate for work performed outside normal business hours
$308	Work performed on Sundays and NT Holidays

Note: Site travel and living expense is an additional charge.

Program management applicable PMI PEC codes

Part Number	Description	Duration
6000	MSL-100 Program Management	
6001	Program Management T&L	3 days
8659	Meridian Mail Prog. Mgmt.	
8660	Meridian Mail Prog. Mgmt. T&L	3 days

Meridian SuperNode Software

MSL-100 software

MSL-100 software is a layered software architecture designed to support rapid feature developement, enhanced switch performance, simplified ordering, and faster deployment of services to End Users.

Each MSL-100 Software Release, or "MSL release" consists of "Product Computing-Module Loads" (PCLs). Each PCL contains all the generally available software for the MSL-100 market. Optional features - known as "optional functions" - can be activated simply by purchasing right-to-use authorization from Nortel Networks.

RTU Meridian SuperNode features

Covered features

Upon purchasing MSL software, whether as part of a new system or as an upgrade to an existing system, the end user has the right to use all generally available Meridian SuperNode features resident in the load with the exception of those features associated with the following applications, unless previously purchased:

- CCS7 (priced per link)

- Packet Handler (priced per LIU)

- Frame Relay (priced per bus interface)

- Dialable Wideband Services (priced per DTCI)

- ISDN - PRI (priced per T-1)

- ISDN - BRI (priced per LCME line)

- Meridian CompuCALL (SCAI) (priced per link and per agent)

- Custom Local Area Signaling Services (CLASS) (priced per XPM and per line)

- Simplified Message Desk Interface (SMDI) (priced per port)

- Automatic Call Distribution (ACD)(priced per agent)

- Enhanced Subscriber Carrier Module Access (ESMA) (Priced per CPM)

Note: For upgrades to existing offices, initial software parameters will match those associated with previously purchased features in the site-specific load. All other parameters will be set to pre-established default values. Switch resources (memory, real-time, etc.) are engineered with respect to these parameters. The end user is responsible for additional resources associated with the activation and use of incremental functionality.

Purchasing RTU for excluded features

The Right To Use (RTU) software features associated with these applications must be purchased separately. Software Optionality Control (SOC) allows Nortel Networks to "enable" optional software/applications, on a site-by-site basis, upon receipt of an appropriate purchase order. If through the normal course of business, Nortel Networks discovers that an end user is utilizing an optional function which has not been formally purchased, Nortel Networks reserves the right to seek appropriate compensation.

Meridian SuperNode software order codes

Base loads

Description	Order Code	CLP	Catalog Discount
MSL05	00035482	$2,250,000	I
MSL06	00037107	$2,850,000	I
MSL07	00038143	$2,983,334	I
MSL08	00040088	$3,183,333	I
MSL09	00039994	$3,383,333	I
DSN Base Software (Federal Only)	00034081	$505,125	I

Note: In addition, the following order codes must be purchased with each base load, for added functionality:

Base loads added functionality

Description	Order Code	Increment
MSL System Line Enabler (non-LCME)	00033472	per line
MSL Enhanced System Line Enabler (LCME)	00033465	per LCME line

Software options (note 1)

Application Kit	Order Code	Increment
CCS7	00033457	per link
Packet Handler	00033459	per interface
Frame Relay	00033461	per interface
Dialable Wideband Services	00033463	per DTCI
ISDN PRI	00033464	per T-1
Meridian CompuCALL (SCAI)	00033467	per link
Meridian CompuCALL (SCAI) Enabler	00033468	per agent
CLASS	00033470	per XPM
CLASS Enabler	00033471	per line
SMDI Enabler	00033488	per link
ACD Enabler	00033994	per agent
DSN SS7 (Federal Only)	00034082	per host
DSN ISDN (Federal Only)	00034083	per host
DSN X.25 (Federal Only)	00034084	per host
ESMA	00036464	Per CPM

Note 1: End user must purchase right-to-use unless previously purchased. Requires Nortel Networks Hardware and Software Engineering to activate.

Software upgrades

Description	Order Code	CLP	Catalog Discount
BCS35 to MSL03	00034098	$333,333	I
BCS36 to MSL03	00033110	$266,667	I
BCS36 to MSL04	00032858	$333,333	I
MSL03 to MSL04	00033111	$133,333	I
MSL04 to MSL05	00033108	$133,333	I
MSL03 to MSL05	00034099	$266,667	I
MSL05 to MSL06	00034853	$133,333	I
MSL06 to MSL07	00034854	$133,334	I
MSL07 to MSL08	00036894	$200,000	I
MSL08 to MSL09	00037986	$200,000	I
MSL09 to MSL10	00039037	$300,000	I
MSL10 to MSL11	00041991	$300,000	I

MSL Software Upgrades

Meridian SuperNode software (MSL) support policy

Nortel Networks' software development process is designed to deliver the advanced services and applications users need to succeed in increasingly competitive markets in a timely manor. Nortel Networks Technical Assistance Service (TAS) will be available for two years on each release, regardless of the number of releases during the period.

MSL support structure

This document summarizes Nortel Networks' software support policy—our commitment and guarantee to you of the quality of our products.

Software status

At any given time, each release falls into one of three software categories: Current, Active, or Retired.

Three levels of software status

Current	*When a new software release becomes generally available, it is referred to as the Currrent release until the next release is generally available.*
Active	*When a new release becomes generally available, the previous Current release is designated as an Active release.*
Retired	*A release achieves Retired status two years from when it became generally available.*

Software Support

Current release

TAS provides full support for each Current release.

Active release

When a load is designated as Active, TAS continues to offer technical support for critical, major, and minor priority levels. Patch support is provided during the software warranty period (12 months after in-service date).

Retired release

A software release is Retired two years after it goes into production. TAS support is limited to "reasonable effort" only on Retired loads. Critical only is supported. Patch support is not available.

TAS continues to provide support services during emergency outages for all Current, Active, and Retired releases.

Service Priorities	
Critical	*Degradation and/or outage*
	Potential degradation and/or outage
Major	*Non-emergency*
	Service-affecting (intermittent or continous)
	Follow-up on a degradation or outage
Minor	*Non-emergency*
	Not Service-affecting

The following table describes each release status and the support levels applicable:

Table 1. Release status and support levels

Status	Definition	Applicability	Support Levels
Current	Most recent GA release.	Available for initial deliveries and upgrades.	Critical, Major, and Minor are supported. Full patch support.
Active	Generally Available. Preceded Current release.	Not available for initial deliveries. Available for upgrades if the release is In-Service within 12 months after it became GA.	Critical, Major, and Minor are supported. Patch support provided during software warranty period.
Retired	No longer available.	Not recommended for in-service switches. Available for interim upgrades only.	Critical only is supported. Patch support is not available.

Two years of support (Note)

Year	1	2	3	4	5

Quarters

MSL Loads

1st Release	Current	Active	Retired
2nd Release	Current	Active	Retired
3rd Release	Current	Active	Retired
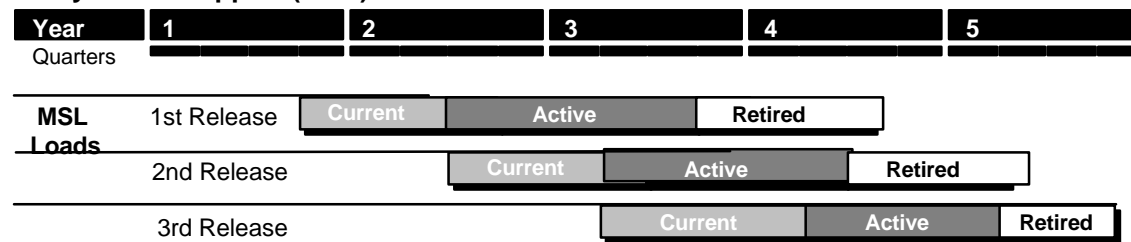

Note: This information applies regardless of the number of releases made available during the two-year period.

Software upgrades

To ensure that the Meridian SuperNode is operating with the current software and that the desired level of support is maintained, each site should be upgraded to the current production release. A Retired release is not recommended for use with an in-service switch, because TAS support is limited to "reasonable effort" only and emergency support is limited to outage situations. If a switch requires full technical support, it should be equipped with a Production or Active load. Please reference the "Meridian SuperNode Application Planning Guide" for the features and applications available with each new software release.

Table 2. Meridian SL-100 (MSL) Software Status (note)

The table below indicates the software support levels of Meridian software releases MSL05 through MSL09.

MSL Release	Generally Available	Retirement Date	Status	
			Commercial	Federal

MSL06	Feb 1997	Feb 1999	Retired	Retired
MSL05	Jun 1996	Jun 1998	Retired	Retired

Note: Unless otherwise noted in a pre-existing contract.

Please reference Meridian SL-100 Software Support Policy for further information on definitions and support levels.

Software warranty

Provided such software is not altered, there shall be, during the warranty period, no failure of such software to function as specified in the applicable NTPs, which failure shall materially affect use by an end user of the designated hardware system for which such software was licensed.

Warranty period

The warranty period for all such software ordered as part of a system order shall be a period of fifteen (15) months from date of shipment or a period of twelve (12) months from the date the system is first placed in-service with an end user, which ever period expires first.

Software patches

Software patches are normally developed to correct service affecting deficiencies identified in software loads which are operating in a live environment. Deficiencies are reported through the Customer Service Report (CSR) system, and are classified as Critical (CR), Major (MJ) and Minor (MN) so that corrective development can be prioritized. Deficiencies classified as Minor are normally corrected in a subsequent MSL release.

In-warranty

During the software warranty period, the site is maintained on a twenty-eight (28) day schedule to receive released patches. Emergency patches are spooled within 48 hours and are applied according to predetermined site-specific procedures. Software related technical assistance support (TAS) is covered during the software warranty period as part of software warranty, except as specified in the "Service Billing Guidelines" in NTP 555-4001-011.

Out-of-warranty

Beyond the software warranty period, the site is removed from the 28-day patch schedule, unless covered under an Extended Service Plan (ESP). Software related technical assistance support (TAS) beyond the software warranty period is billable at the then current TAS rates. Patches if available per support category, as defined in Table 1, are applied as part of Customer Service Report (CSR) resolution. Emergency patches are spooled immediately at no charge.

Distributor BCS upgrade pricing

The following upgrade prices apply up to BCS36:

Fixed price per insertion: distributor list

The following table includes customer list prices for a BCS upgrade:

BCS Upgrade	PMI Number	Commercial List Price
BCS SW Charge	00006086	$26,666
BCS Implementation	00008278	$30,934
Total		$57,600

Variable prices

Memory and other hardware requirements associated with a BCS upgrade vary with each switch and, therefore, are quoted on a site-by-site basis. Sites which require a Supernode upgrade to accommodate the BCS upgrade will be quoted accordingly.

Other charges

The table below describes charges in addition to all prices mentioned earlier:

Additional Charges	CLP	Distributor Discount
BCS/MSL upgrade requested during weekend [8:00 a.m.Saturday to 8:00 a.m. Monday, Central Time] (PMI # 23639)	$ 7,100	H
Overseas charge (Non- CONUS) (PMI #19717) (BCS/MSL)	$14,400	H
Dump and restore (not applicable to BCS upgrade) (PMI #6082)	$25,150	H
Accelerated Software Delivery (PMI #25717)	$20,400	H
Additional compact disk/each (PMI #7299)	$850.00	H

For more information

For more information about Nortel Networks' software development cycles and software administration policy, please contact your Nortel Networks Authorized Sales Representative.

Power Plant/Batteries

To interpret Power Plant models, please note the following: the letter at the end of the model number, either A or C, represents the type of battery.

- A = Absolyte II (GNB);

- C = Lead Calcium (Exide).

The number immediately preceding this letter represents the number of reserve hours provided by the battery. The choices are three, four, or eight hour reserve.

Any digits preceding the number of reserve hours represents the AMPS provided by the power plant, which range from 50 to 2,000 AMPS.

Note: In some of the model numbers an H is indicated; this H is merely used as a separator between the number of AMPS and reserve hours and does not represent the type of battery or any other aspect of the battery.

This page was intentionally left blank.

Training

Training center location

The Nortel Networks Training Center is located at 1057 Sherman St., Richardson, TX 75081 (Northeast Dallas area). See the Nortel Networks Training Center internet site at http://www.nortelnetworks.com.

Scheduling policies

Prepayment of classes is required, with payment forms of purchase order, credit (VISA, MC or AMEX), check, money order, contract number or department number to be charged accepted. NOTE: The training center will work with the distributor/customer on payment of invoice.

The Training Center also has the following stipulations:

- Cancellation of course(s) required at least ten (10) days prior to start of class or tuition will be charged in full. Cancellation numbers are provided, and credit will not be allowed without this cancellation number.

- Travel and Living expenses are the sole responsibility of the distributor/ customer.

- Permission is required from Nortel Networks management to waive a prerequisite course.

Lodging

Pre-registration for recommended hotels are provided with the course confirmation package supplied by the Training Center. Additional hotel information will also be supplied upon request.

Local transportation

Transportation in the Richardson area is limited to taxi or rental car services. Expenses incurred for this transportation are the responsibility of the students or their organization.

Meals

The Training Center is also equipped with vending machines for light snacks and beverages.

Dress

Dress for attendance may be business casual (sport shirts, slacks, etc.).

Telephone messages

Incoming messages to the Nortel Networks Training Center, at (972) 684-8771, ESN: 448-8771, 800-775-6835, will be posted on the Student Bulletin Board, which is located in the Main Lobby. The Training Center policy is to prevent class interruption with telephone calls except in cases of emergency.

Class schedule

On the first day of each course, arriving students should plan to be at the training center at the time specified in the training confirmation letter.

See the Nortel Networks Training Center Course Catalog for further information and course content. Training Catalogs and Training Documentation information can be ordered by calling (972) 684-8777, ESN: 444-8777, 800-775-6835.

Documentation

Typically each Meridian SL-100 is shipped with an initial set of Documentation which includes, but is not limited to, the following:

• Nortel Networks Publications (NTP)

• Customer Specific specifications and drawings

• Hardware related documents (IS, FS, CA, etc.)

The prime medium for documentation is HELMSMAN CD-ROM (compact disk); however, some limited documents will continue to be provided on paper. Two HELMSMAN **CD-ROM diskettes will be provided with each new MSL-100 PBX system sold. An IBM PC compatible "HELMSMAN" work-station to run the application may be purchased separately (see HELMSMAN component listing and order example on next page). Macintosh and Unix platforms are also Helmsman compatible, but are not sold by Nortel Networks.**

Medium	PMI number	CLP price/set	Distributor Discount
Full Set	22331	$33,000.00	H
NTPs Only	20640	$21,000.00	H
Updates (per PCL Jump)	22332	$ 3,500.00	H

Note 1: HELMSMAN/CD-ROM and EMAP pricing and components are listed below. The Helmsman and EMAP computer platform and options are subject to the "Approval To Quote, Pre-Released Products" procedure.

Note 2: Feature REL-DOCS (Release Documentation) is available upon request (after BCS-33) at an additional charge of $3,500 (PMI #27114).

For internal Nortel Networks employees:

A new documentation ordering system has recently been placed on-line. This system, Documentation Ordering and Tracking System (DOTS), allows internal Nortel Networks employees to order documentation (CD) through the following internet home page: http://47.119.160.85/

HELMSMAN Compound Library (CD-ROM)

The HELMSMAN Compound Library supplies the customer with a compact disk, along with start-up instructions and operating software to rapidly scan, locate, view and/or print text and graphic documentation. The customer must specify the software level applicable to the switch (BCS or MSL).

HELMSMAN Compound Library (CD-ROM) pricing

Initial systems

For documentation/NTPs on compact disk, the CD-ROM Compact Disk (PMI No. 7287, order code HLM-4031-001) is $4,165. This disk contains NTPs, Release Documentation and the application software program, for either DOS, MacIntosh or Unix. When ordering, please be sure to specify the customer/location and the platform type that will be used (DOS, MAC or Unix).

Upgrades

For any BCS/MSL upgrade, one copy of the CD-ROM Compact Disk (PMI No. 7299) will be included with the implementation or BCS/MSL upgrade, which includes the latest version of the CD-ROM application software program. Again, when ordering, please specify the customer/location. Additional copies may be purchased for $850 each (PMI No. 7299).

Network

Should the user want a LAN configuration, it will be necessary to purchase the CD-ROM Compact Disk (PMI No. 7287) for $4,165. It will also be necessary to purchase the CD-ROM application software program (PMI No. 30038) for $490 per concurrent user.

EMAP workstation

The Enhanced Maintainance Administration Position (EMAP) is an integrated package of hardware and software which combines the conventional MSL-100 MAP Visual Display Unit (VDU) and a CD-ROM drive. This enables the ability to access HELMSMAN, the electronic documentation delivery system used to read Northern Telecom Publications (NTPs) on CD-ROM.

Ordering steps

1. Specify EMAP type (Commercial or Federal):

Option	PMI Number	CLP	Distributor Discount
EMAP Workstation (Commercial)	00037967	$10,000	H
EMAP Workstation (Federal)	00037966	$10,200	H

2.   Always order EMAP printer:

Requirement	PMI Number	CLP	Distributor Discount
EMAP Printer	00037965	$1,600	H

3.   IOC connectivity, order EMAP current loop components (note):

Option	PMI Number	CLP	Distributor Discount

EMAP current loop component kit:
    A0384777 - Belkin Cable adapter
    A0378484 - BlackBox RS232/CL adapter
    A0378880 - BlackBox Cable 2 Feet
	00038457	$564	H

Note: ISM does not require current loop interface.

For more information

For more information on available product literature, please refer to the Sales and Marketing Bulletin SMB.96.01, "Meridian SuperNode (MSL-100) Sales Collateral Profile"..

Note: Several user guides are listed in Section 1.2, "Training" Autoquote Category #16. For more information on user guides, contact Gayle Rogers, (972) 684-8777.

Meridian MSM (Release 12)

The Message Services Module (MSM) is a large voice messaging system. The MSM is a Supernode system with Supernode packaging and components. It is NEBS- (Network Equipment Building Specification) compliant and Bellcore-certified.

This system is compatible with the DMS 100, MSL-100, AT&T 1AESS, 5ESS (using a SMDI integration).

The system ranges in size from 48 ports to 192 ports and grows in 24 port increments. Hours of storage range from 150 to 600, growing in 150 hour increments. All storage is shadowed.

The following is a listing of the present MSM packages:

Master Package Title	Release 12
Message Services Module 48 Port/ 150 Hour System	NTZB70AA
Message Services Module 48 Port/ 300 Hour System	NTZB70BA
Message Services Module 72 Port/ 300 Hour System	NTZB71AA
Message Services Module 72 Port/ 600 Hour System	NTZB71BA
Message Services Module 96 Port/ 300 Hour System	NTZB72AA
Message Services Module 96 Port/ 600 Hour System	NTZB72BA
Message Services Module 120 Port/ 450 Hour System	NTZB73AA
Message Services Module 120 Port/ 900 Hour System	NTZB73BA
Message Services Module 144 Port/ 450 Hour System	NTZB74AA
Message Services Module 144 Port/ 900 Hour System	NTZB74BA
Message Services Module 168 Port/ 600 Hour System	NTZB75AA
Message Services Module 168 Port/ 1200 Hour System	NTZB75BA
Message Services Module 192 Port/ 600 Hour System	NTZB76AA
Message Services Module 192 Port/ 1200 Hour System	NTZB76BA
MSM 24 Port Upgrade (Upgrades Port/Hrs Systems) 72/300 to 96/300 120/450 to 144/450 168/600 to 192/600 72/600 to 96/600 120/900 to 144/900 168/1200 to 192/1200	NTZB41CB

Listing of MSM Packages cont.

Master Package Title	Release 12
MSM 24 Port/150 Hour Upgrade (Upgrades Port/Hrs Systems) 48/150 to 72/300 144/450 to 168/600	NTZB42CB

Models and Supercodes

Models are Engineering Tools which are comprised of component parts, some of which may also include Supercodes as one of the components. The Models are utilized by Engineering and Pricing personnel for convenience of entering one part number, which is representative of several part numbers for a similar purpose.

Model and Supercode pricing is not published due to the high number of changes required by engineering specification and design changes. However, the pricing is derived as a total of the component parts. (Configurations are subject to revisions over time).

For Model and Supercode referencing, please refer to the "MSL-100 Budgetary Planning Guide". The Budgetary Planning Guide is available from the MSL-100 Marketing group.

This page was intentionally left blank.

Meridian HomeOffice II (Release 2.1)

The Meridian HomeOffice II (MHO II) is a compact, flexible, cost-effective, and secure home office communications device. MHO II offers the corporate telecommuter full PBX features and functionality, while at the same time providing best-in-class Ethernet connectivity to the corporate LAN/WAN. MHO II replicates the corporate office communications environment in the home. At the corporate host site, the MHO II Line Card resides in a Meridian SL-100 IPE shelf. Assuming there is adequate capacity, the MHO II Line Card can use existing PRI/T1 trunks to the public carrier; therefore, provisioning for telecommuters is as simple as installing the card into the Meridian SL-100 and configuring the 16 virtual phones. MHO II extends the Meridian 2616/2216 and M2216CD digital telephones over Basic Rate ISDN from the public carrier to the remote site or telecommuter's home (see figure on next page).

The Meridian HomeOffice II (MHO II) system is compatible with the MSL-100 and M1 systems.

The system ranges in size from 48 ports to 192 ports and grows in 24 port increments. Hours of storage range from 150 to 600, growing in 150 hour increments. All storage is shadowed.

Software Dependencies

Software and hardware baseline for the MHO II on the MSL-100 is as follows:
- MSL09 Switch System Software
- IPE09AA Peripheral Software

Availability

MHO II on the MSL-100 is scheduled to be available for limited release in December 1998 and Generally Available in 1Q99.
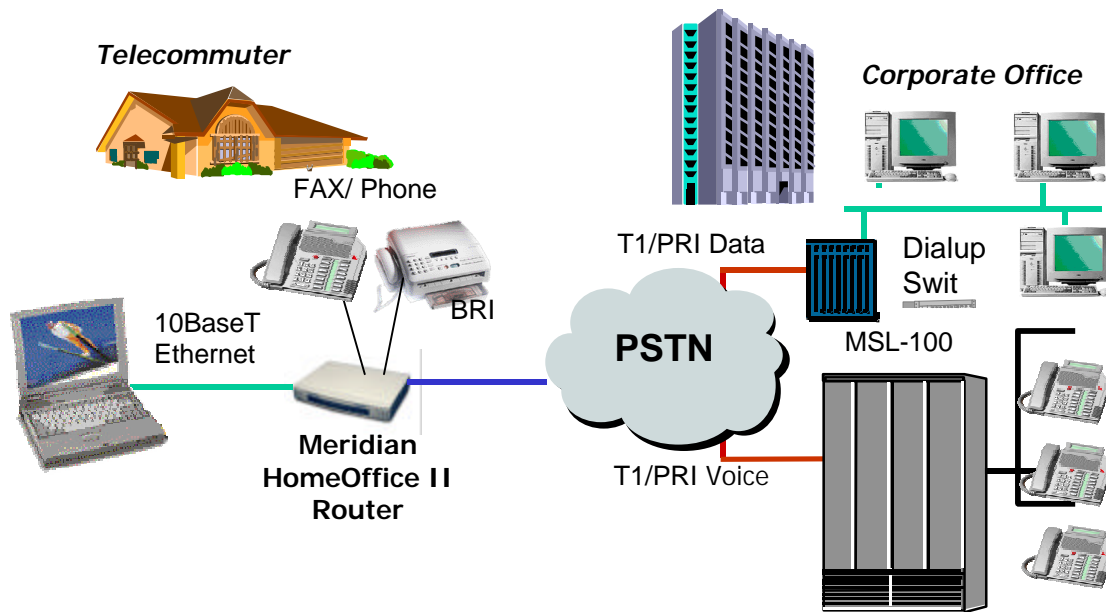

The following is a listing of Orderable Items for:
Meridian HomeOffice II hardware, Software, Documentation. and Miscellaneous

Description	PEC	CPC	CLP	Discount

Meridian HomeOffice II is available in the following components and packages:

Component/Package	Description
Meridian HomeOffice II Model 22 **NTDR02AB A0742136**	Meridian HomeOffice II Router Model 22 c/w 'U' interface ISDN Router, CDROM, User Guide, Power Brick, RJ45 ISDN Cable, RJ45 UTP Ethernet Cable (crossed), DB-9 RS 232 Admin Cable, Online/Local Call key Cap, North America Power Cable.
Meridian HomeOffice II Bundle North America **NTQR01AA A0736314**	Meridian HomeOffice II Model 22 as above includes Meridian 2616 Digital Set (Gray).
Meridian HomeOffice II ACD Bundle North America **NTQR01BA A0736316**	Meridian HomeOffice II Model 22 (U interface) as above includes Meridian 2216 Digital Set (Grey).
MHO Line Card *NTDF29AB A0739531*	Meridian HomeOffice II Line Card with management/interconnect cable and installer notes
MHO Line Card Configuration Guide **NTDR07AB A0743199**	This guide will explain how to install and configure the Rapport Line Card on the following switches: • Meridian 1 • SL-100 The card is identical for both switch types; physical installation procedures are identical; software configuration procedures are different.
Planning Guide **NTDR05AB A0743197**	This guide will provide the network administrator with guidelines on planning for HomeOffice deployment. Planning for inter-operability with Rapport, Cisco, Ascend, and other non-Nortel Networks devices will also be covered.
Network Administration Guide **NTDR06AB A0743198**	This guide will provide the network administrator with instructions on how to use the Local Manager software to configure the network. Configuration for interoperability with other devices will also be covered.
Technical training CD **NTDR60AA A0759657**	This CD ROM provides self-paced multimedia installation training for technical staff.

Introduction to Services

Our complete package of integrated support offerings has services to cover distributor customer telecommunications and data processing systems. From warranty and throughout system life, our resources and commitment make Nortel Networks the leader in service.

Three major platforms support the organization of our services—Warranty, Extended Service Plan (ESP) and Maintenance Support Services. Warranty Services introduce the core of our support. An Extended Service Plan (ESP) represents post-warranty support, offering core services and optional services. Maintenance Support Services can be purchased individually from initial system in-service, as an ESP option, or as post-warranty non-ESP services. The integrated offerings are grouped in three ways: Remote Services, Field Services, and Performance Support. These are the building blocks that create a structure for total system performance.

Figure 5-1

Building blocks of total system performance

Warranty Services

Warranty services introduce Nortel Networks' commitment to maintaining one standard of distributor support: excellence. During the first year that a system is in-service, warranty services provide routine Repair and Replacement Services, Technical Assistance Services (TAS) and Design Change Support for hardware and software. These services supply the expertise and resources to establish a level of support that remains solid long after the initial warranty ends.

Figure 5-2

Basic organization of warranty services.
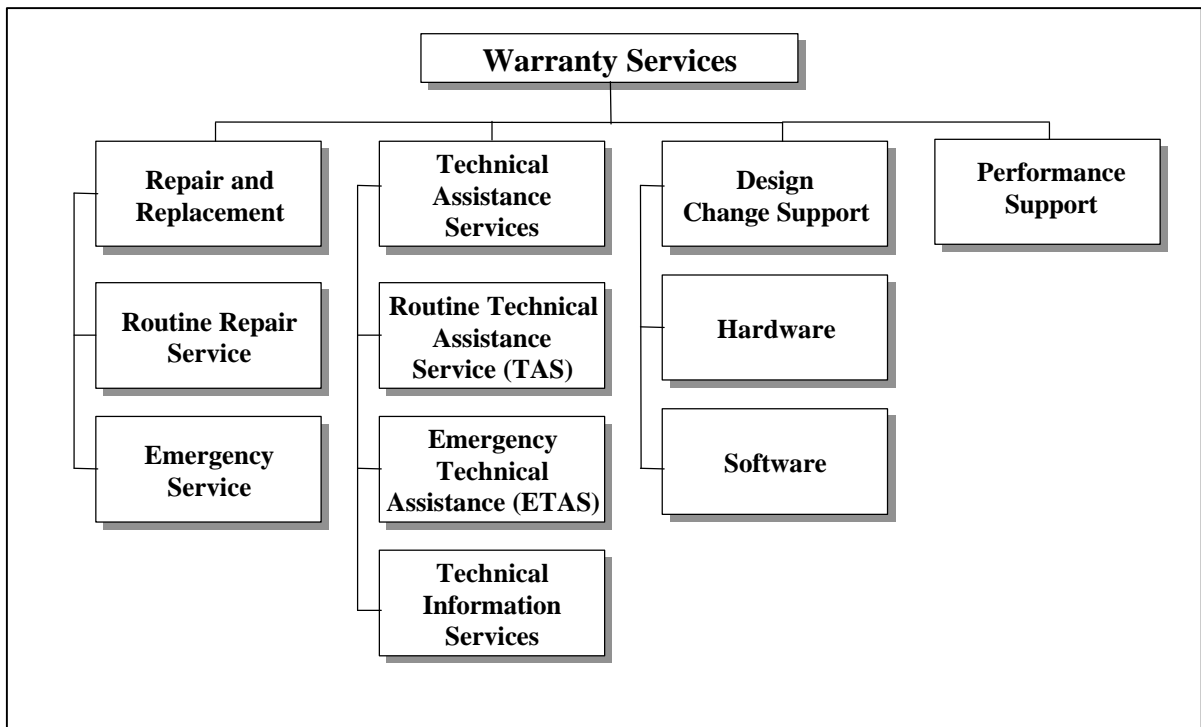

Repair and replacement

Nortel Networks' Repair and Replacement service provides timely and efficient service for units during (and beyond) the warranty period—in routine and emergency situations. In emergency situations, necessary replacements are shipped from Nortel Networks within 24 hours. Routine like-for-like replacements have a target turnaround of three days for failed hardware assemblies, printed circuit packs and similar hardware.

Routine service

Routine repair service is available during Nortel Networks' business hours, Monday through Friday, 8 AM to 5 PM, Central Time. Calls received after business hours are forwarded to a TAS representative who determines the needs and priority of a situation.

Emergency service

Emergency service is available 24 hours per day, 7 days per week for defective parts that are vital to the systems call processing ability. One or more of the following conditions could signal the need for emergency service:

- The last spare of a circuit pack has been used to replace a defective pack in the switch, and all similar packs in the switch are carrying live traffic.

- TAS determines that emergency service is required to correct the situation.

Nortel Networks will either repair the defective equipment on-site or ship a like-for-like part within 24 hours of the request. The customer is responsible for sending the defective part back to Nortel Networks within 30 days of the shipment date. Nortel Networks does not require that the defective part be received from the customer before sending the like-for-like part.

Technical Assistance Services (TAS)

TAS provides support for distributor customers experiencing operational difficulties. Usually, TAS will diagnose and resolve problems by telephone or data link to the end user office. Special remote terminals allow TAS to communicate with the system to diagnose fault conditions and recommend corrective action. This function provides three basic classifications of assistance to the distributor: emergency technical assistance, routine technical assistance and technical information service.

Emergency Technical Assistance Service (ETAS)

Emergency Technical Assistance Service (ETAS) provides distributors immediate and continual assistance to resolve emergency conditions—24 hours a day, 7 days a week. Through verbal reports and remote diagnosis, ETAS personnel recommend actions to restore stable operation as quickly as possible.

Routine technical assistance service

This service is available to distributors who require problem isolation or resolution in a non-emergency situation. This service is available during business hours, 8 AM to 5 PM, Central Time, Monday through Friday. It is primarily used for analysis of routine technical problems from site personnel and system-generated information.

Technical information service

The Technical Information Service distributes the following publications:
ETAS Warning Bulletin (EWB) and Customer Advisory Bulletin (CAB).

Nortel Networks will provide technical assistance free of charge, during the
initial warranty period, or ESP as it is defined in the terms and conditions of the
service contract or program. Some situations may arise during this no-charge
warranty period that will result in a service request being considered as billable.
Such situations include, but are not limited to:

• requests resulting from problems with equipment not furnished by Nortel
Networks

• requests where the problem solution was available via Nortel Networks
documentation such as NTP's, Advisory Bulletins, and BCS/MSL release
documents

• requests which result in PRSUs which alter the design intent of standard
software in order to provide customer requested changes in operations

• requests for on-site assistance in lieu of remote testing

• non-emergency requests outside normal business hours (8 AM to 5 PM,
Central Time, Monday - Friday) unless scheduled with appropriate TAS
manager in advance

• requests for assistance in performing system data changes or changes to
write-restricted tables

• requests for assistance in identifying faulty hardware or software for which
standard maintenance fault-locating procedures exist

Technical assistance rates

The following are the current charges for Nortel Networks technical assistance
(subject to contractual agreements):

Type	Time of Service	Cost (per hour, per query, one hour minimum)
Standard rate	During normal business hours 8:00 AM–5:00 PM, Central Time, Monday through Friday	$300
Overtime rate I	Provided outside normal business hours	$450
Overtime rate II	Provided on Sunday or Nortel Networks scheduled holidays	$600

Hardware warranty

There are two types of hardware warranty situations:

- initial and extension hardware: twelve (12) months from the date of turnover to customer ("K" date), unless otherwise defined in purchase agreement

- repaired or replaced hardware: thirty (30) days from the date of shipment or remainder of the twelve (12) month initial warranty, whichever is greater

The defective part must be returned within 30 days of Nortel Networks ship date or the current purchase price will be invoiced for the replacement part.

Meridian SL-100 software support policy

Nortel Networks provides new features and enhanced software functionality through the BCS/MSL release process. Due to the evolving nature of this demand driven process, it becomes necessary to clearly define the level of support associated with specific BCS/MSL loads as they move from one support category to another over time.

- EWB advise distributors of potentially serious problems and how to avoid these problems.

- CABs are switch-specific TAS publications that address non-emergency up-to-the-minute operational information useful to on-site technical personnel.

Adhering to the guidelines contained in these publications helps distributors avoid undue problems.

Design change support

Design Change Support provides on-going upgrades, enhancements and maintenance for both hardware and software in a timely, coordinated manner. In an industry that quickly changes, this kind of support meets the increasing user requirements for up-to-date technology while keeping performance concerns over product evolution at a minimum.

Hardware

Hardware design changes are applied when feature enhancement or product evolution affects Nortel Networks equipment. The Extended Product Inventory Control (EPIC) database is used to coordinate change control. EPIC is a distributor accessible database that represents the specific site inventory and revision status of Nortel Networks hardware. EPIC compares

inventory and revision status data to base line release levels and provides notification of design changes.

The EPIC database is used to identify the packs, modules, or frames requiring upgrades when design changes are identified. The database contains the Product Engineering Code (PEC), release level, frame, shelf and slot location obtained from physical audits of the on-site Nortel Networks equipment.

The field change applications function applies the design changes while performing Design Change Application - related hardware modifications and feature enhancements.

Software

Software enhancements or design modifications between MSL software releases are called Post Release Software Units (PRSUs). Nortel Networks downloads and applies all available software PRSUs on a monthly basis. In-warranty sites receive available emergency and routine PRSUs as part of their warranty service. Having a set process for spooling PRSUs to site databases ensures that the operational software load will always be up to date.

Service billing guidelines

Service billing guidelines refer to billable situations and conditions associated with TAS, hardware warranty, and MSL software upgrade policy.

Technical Assistance Service (TAS)

Nortel Networks provides distributors with on-going technical assistance for the identification and resolution of technical issues in accordance with NTP 555-4001-011. As stated in the practice, some technical assistance requests may be subject to billing.

Support categories

Nortel Networks provides the following three levels of support categories for installed MSL software which is covered by a current Nortel Networks Software License Agreement.

Current (C)

Production software available for shipment with new systems and MSL upgrade orders. Feature and operational functionality and PRSU activity supported by Nortel Networks TAS and PRSU Administration.

Active (A)

No longer available for shipment with new system orders. May be purchased as a MSL upgrade. Feature packages which are part of the base release may be ordered. Feature and operational functionality and PRSU activity supported by Nortel Networks TAS and PRSU Administration.

Retired (R)

No longer available for purchase. Nortel Networks TAS support limited to problem diagnosis on a "reasonable effort" basis only. PRSUs and feature packages are not available.

Service support definitions

Nortel Networks TAS Support: Fully trained resources "available" 24 hours per day, seven days per week to provide remote emergency and routine technical assistance with the ability to diagnose fault conditions and affect resolution. Billable condition is dependent upon Warranty/ESP status.

PRSU Administration Support: Software updates are available to correct Service Affecting software faults which fail to meet the specifications outlined in the applicable design documents (DDOCS) for the specific software load. Billable condition is dependent upon software warranty/ESP status.

Table 5-1

Category Applications

Category	Shipped with new systems	Shipped with MSL upgrades	Nortel Networks TAS support	Incremental Software Unit (PRSU) support
Current	Yes	Yes	Yes	Yes
Active	No	Yes	Yes	Yes
Retired	No	No	Reasonable effort only	No

Table 5-2

Meridian SL-100 Software Status

MSL Release	Generally Available	Retirement Date	Commercial Status	Federal Status

*Unless otherwise noted in a pre-existing contract.

Software warranty

Provided such Software is not altered there shall be, during the warranty period, no failure of such Software to function as specified in the applicable NTPs, which failure shall materially affect use by an End-User of the Designated Hardware system for which such Software was licensed. The warranty period for all such Software ordered as part of a system order shall be a period of 15 months from the date of shipment or a period of 12 months from the date the software is first placed in service with an End-User, whichever period expires first, unless stated as a shorter period of time in this product catalog. The warranty period for all such Software ordered as "Extended Software" to be added to an existing system shall be a period of 12 months from the date the software is placed in service. The addition of Extended Software to a system shall not extend the warranty period on any previously ordered or installed Software of that system.

Software PRSUs are normally developed to correct service affecting deficiencies identified in MSL loads which are operating in a live environment. Deficiencies are reported through the Customer Service Report (CSR) system, and are classified as Critical (CR), Major (MJ) and Minor (MN) so that corrective development can be prioritized.

The following paragraphs describe software warranty in three situations:

• initial switch Warranty or ESP

• stand-alone MSL upgrade (non-ESP)

• beyond software warranty

Initial switch warranty or Extended Service Plan (ESP)

While under Warranty or an ESP, the site will receive Emergency and Routine service affecting PRSUs as part of their Warranty or ESP service. Software Administration will ensure that all in-warranty or ESP offices are maintained at an up to date software level and will coordinate all application activity with the maintainer. Each Warranty and ESP site is on a 28 day schedule and contacted once during this time cycle to receive released PRSUs. Emergency PRSUs are spooled immediately by PRSU Administration. TAS during the initial switch warranty period or ESP term is covered as a part of Warranty or ESP, except as specified in the Service Billing Guidelines.

Stand alone MSL upgrade (non-ESP)

Stand-alone MSL upgrade (Non-ESP) sites are maintained on a 28 day schedule for the duration of the software warranty period to receive released PRSUs. Emergency PRSUs are spooled immediately by the PRSU Administrator. Software related technical assistance during the software warranty period is covered as part of software warranty, except as specified in the Service Billing Guidelines.

Beyond software warranty

Out of Warranty and Non-ESP sites are removed from the 28 day schedule. Software related technical assistance beyond the software warranty period is billable at the then current TAS rates. PRSUs (if available per support category) are applied as part of Customer Service Report (CSR) resolution. Emergency PRSUs are spooled immediately by the PRSU Administrator at no charge.

Extended Service Plan

The Nortel Networks ESP is a comprehensive package of services with a pre-established price designed to extend the support offered during Warranty. ESP represents the most complete, cost-effective post-warranty support available. The need for sophisticated service offerings, coupled with the growing demand to free telecommunications personnel from daily operations, positions the ESP as the solution for meeting both system performance requirements and business objectives.

Offered on a one-year minimum basis and is renewable with 90 days notice, the ESP has significant benefits for the distributor:

• By periodic billing, predetermined monthly costs are identified for the complete calendar year. Periodic billing eases distributor planning and budgeting for maintenance expenses.

• Working relationships established with the distributor during the warranty continue; no momentum is lost during a transition.

• ESP sites continue to receive all available software enhancements downloaded and applied on a monthly basis; post warranty, non-ESP services are purchased on a per-occurrence basis at non-discounted rates.

An ESP extends our commitment to maintaining one standard of distributor support: EXCELLENCE.

Figure 5-3

Basic organization of ESP offerings for Meridian SL-100 (distributor)

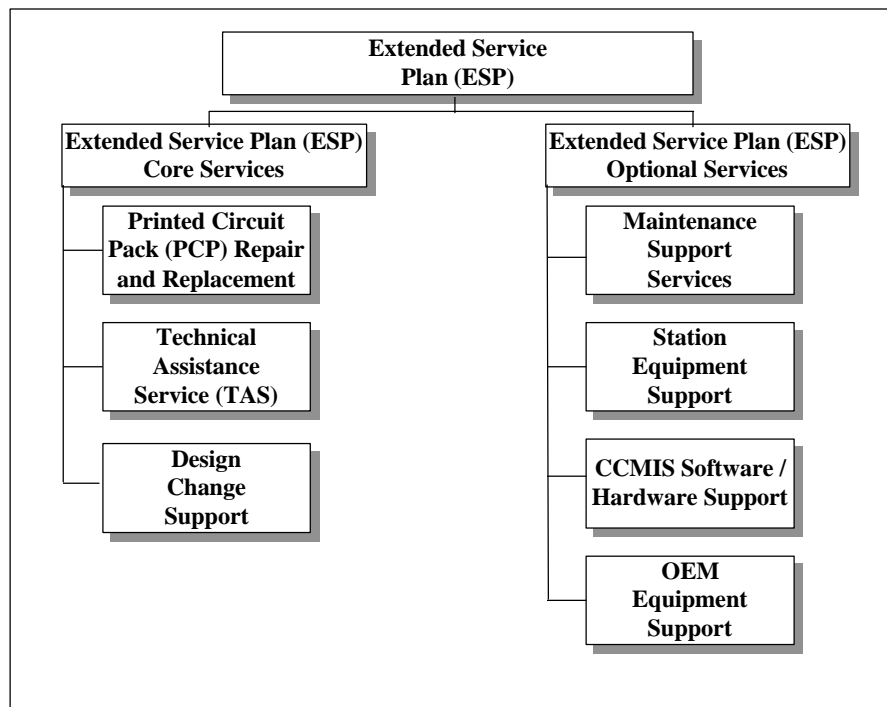

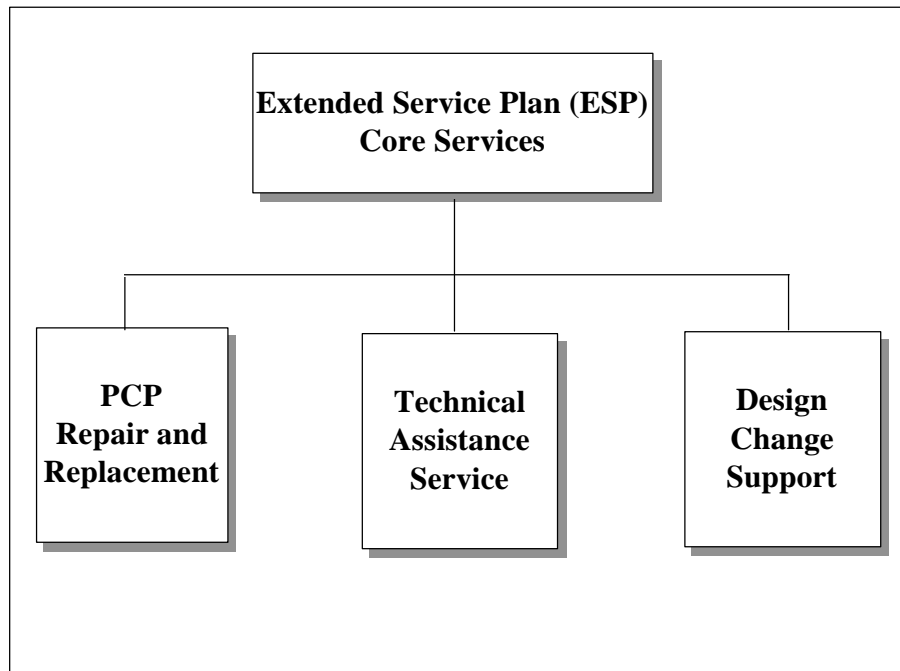

Note: An ESP may not be available from Nortel Networks in all locations and may be subject to certain restrictions. The distributor should contact Nortel Networks with any questions concerning availability in specific locations.

ESP core services

ESP Core Services combine routine Printed Circuit Pack (PCP) Repair and Replacement, TAS, and Design Change Support to provide the primary services required for day-to-day support of Meridian SL-100 service operations.

Figure 5-4

Basic organization of ESP core services for Meridian SL-100 (Distributor)

```

Note 1: Core support pricing varies with the complexity of the Meridian SL-100. For example, Meridian Mail GPs increases the technical complexity to the basic Meridian SL-100 host. A lower Core Support pricing is also available on "Primarily Tandem" (NSS, etc.) switches where 60% or more of the total ports are trunks. Sites outside the Continental United States (CONUS) are given pricing consideration for off-hours support, increased communications expense, etc.

PCP repair and replacement

Nortel Networks' PCP Repair and Replacement service provides timely and efficient service for units during (and beyond) the ESP—in routine and emergency situations. In emergency situations, necessary replacements are shipped from Nortel Networks within 24 hours. Routine like-for-like replacements have a target turnaround of 3 days for failed equipment like hardware assemblies and circuit cards.

Routine service
Routine repair service is available during Nortel Networks' business hours, Monday through Friday, 8 AM to 5 PM, Central Time. Calls received after business hours are forwarded to a TAS representative who determines the needs and priority of a situation.

Emergency service
Emergency service is available 24 hours per day, 7 days per week. Defective parts that are vital to the call processing ability of the system qualify as "Emergency" parts. An emergency surcharge of $50 will be assessed for each order. One or more of the following conditions could signal the need for emergency service:

- The last spare of a circuit pack has been used to replace a defective pack in the switch, and all similar packs in the switch are carrying live traffic.

- TAS determines that emergency service is required to correct the situation.

Nortel Networks will either repair the defective equipment on-site or ship a like-for-like part within 24 hours of the request. The customer is responsible for sending the defective part back to Nortel Networks within 30 days of shipment date. Nortel Networks does not require that the defective part be received from the customer before sending the like-for-like part.

Technical Assistance Services (TAS)
TAS provides support for distributors experiencing operational difficulties. TAS support is described in detail, starting on page 4 of this section.

Design change support

Design Change Support provides on-going upgrades, enhancements and maintenance for both hardware and software in a timely, coordinated manner. Design Change Support is described in detail, starting on page 6 of this section.

Figure 5-5

Basic organization of ESP optional services for Meridian SL-100 (distributor)
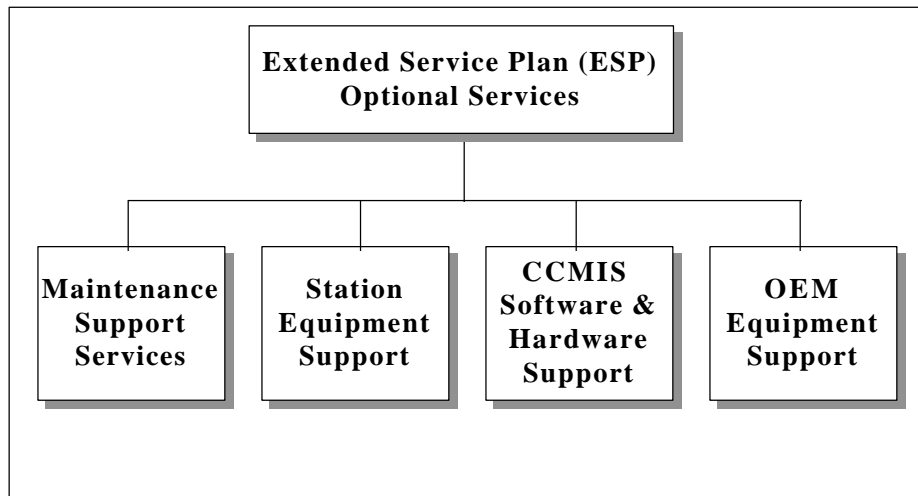

ESP optional services

Distributors can expand ESP coverage to include optional services. ESP optional services for the Meridian SL-100 (distributor) consist of Maintenance Support Services and Station Equipment Support. These are available separately or as customized packages.

> *Note:* Station Equipment Support is not available as a stand-alone service contract.

Maintenance support services

Maintenance support services are an array of integrated service options designed to assist distributors in maintaining an efficient, reliable, and cost-effective system. Three major functions are included: Remote Services, Field Services and Performance Support.

> *Note:* Due to the extensive offerings, Maintenance Support Services are covered in full in a separate section called Maintenance Support Services.

Station equipment support

With the purchase of annual per unit station set support, Nortel Networks will provide a new or repaired, functionally equivalent replacement station set in exchange for a defective station set. A proprietary station set is defined as proprietary to the Meridian SL-100, manufactured by Nortel Networks, and bears the coding "NT". Certain non-proprietary station sets, as identified in the ESP, may be included. As routine service, Nortel Networks will ship a replacement proprietary set (in exchange) within 3 days of receiving the customer's defective proprietary set.

Depot repair/replacement

Provides routine depot level, mail-in repair and replacement service, 8:00 AM–5:00 PM, Central Time, Monday through Friday. Emergency support is available 24 hours a day, 7 days a week. Requests for on-site repair will be invoiced at the depot repair rate plus actual time and travel expenses at the then current rates, plus a 30% service charge per service request.

Basic on-site coverage

This coverage provides a Nortel Networks authorized field engineer to respond to distributor requests for service. Calls are returned on the average within two hours, with next-day on-site response to diagnose trouble and return the equipment to good working condition.

Note: These responses are based upon the equipment site being within the basic support zone 1(0-75 miles). Zone 2 (76-126 miles) add 42%. Zone 3 (beyond 126 miles) standard rate plus time and travel. On-site coverage is not available outside CONUS (Continental United States). Equipment is subject to on-site inspection and inventory. **Nortel Networks reserves the right to exclude certain equipment from ESP coverage.**

Annual Meridian SL-100 ESP pricing (Distributor)

The Distributor price schedule is applicable to Nortel Networks Authorized Meridian Distributors.

Note: **Company Confidential - The prices herein are routinely available for inspection by Nortel Networks' distributors, but solely for the purpose of evaluating transactions or potential transactions with Nortel Networks. The prices and pricing structures contained herein are valuable competitive information and should be considered confidential. The information herein may be used solely for authorized purposes and may not be used, duplicated, or disclosed for any other purpose without the written consent of Nortel Networks.**

All prices are based on Nortel Networks' **Standard Terms and Conditions of Sale**. Please refer to the attached service descriptions for specific applications. Special conditions, including required flowdowns from Government and end user contracts, will be evaluated on a case-by-case basis for pricing impact.

ESP core services price list

Core service net distributor prices for 1999 are listed below:

Table 5-3

**Meridian SL-100 operation support services
(circuit pack repair/replacement and TAS)**

Service	Net Distributor Price

Basic PBX per host
    10,000 + Port System
    5,000 – 9,999 Port System
    Less Than 5,000 Port System
	$52,000.00
	$42,000.00
	$42,000.00

Plus price per port (Note 1)
    10,000 + Port System
    5,000 – 9,999 Port System
    Less Than 5,000 Port System
	$5.00
	$6.00
	$4.00

Basic Tandem per host (60/40 or more trunk/line ratio)	$38,000.00
Plus Meridian Mail Operations Support per host (price per port)	**$175.00**
Plus outside CONUS Support per host	$6,700.00
Less 10% Multi-Host Discount	(Note 1)
Less 25% New System Discount	(Note 2)

Note 1: Credit applied to "Basic & Optional Services (per host)"; based on all multi-hosts for the same end-user and distributor being covered by an ESP.

Note 2: Credit applied to a 3-5 multi-year ESP if purchased with a new system.

ESP optional services price list

Optional net distributor prices for 1999 are listed below.

Note: Pricing for 1999 and 2000 multi-year (3-5 years) ESP's will be calculated at a firm fixed price (subject to a yearly polling). Pricing for year 2000, one year ESP's will increase 4%.

Table 5-4a

Station equipment support

Service	Net Distributor Per Unit Price 1999
Basic, Display, Data and/or Display & Data, and Add On Modular	$9.75

CCMIS equipment service contracts

CCMIS Core Service	$20,000.00

Maintenance support services

Optional net distributor prices for 1999 are listed below:

Table 5-4b

Remote services

Duration	Net Distributor Price
Remote Surveillance (with monitoring equipment)	
Annual	$45,000.00
6 Months	$23,700.00
1 Month	$5,900.00
Remote Maintenance (with monitoring equipment)	
Annual	$97,000.00
6 Months	$53,400.00
1 Month	$13,400.00

Table 5-4c

Performance support

Type of service	Net Distributor Price
Translation support per hour	$175.00

Table 5-4d

Field services

Duration	Net Distributor Price
Field Support (Note 1)	
6 months	$106,000.00
1 month	$20,000.00
1 week	$5,175.00
1 day	$1,056.00
Per hour (normal business hours)	$132.00
Per hour (outside normal business hours)	$198.00
Per hour (on Sunday or Nortel Networks-scheduled holidays)	$264.00
Data Services	(Note 2)

Note 1: Excludes actual travel and living expenses when required.

*Note 2:* Pricing for data services are quoted in the Data Services Price Manual.

Maintenance Support Services

Introduction

When distributors call on us for technology, they reach a world of support. Our Maintenance Support Services are integrated service options designed to assist the distributor in maintaining an efficient, cost-effective system—remotely or on-site. The services provide a blend of expertise and resources that can be tailored to meet the requirements of each unique environment—from hardware and software used, to people and processes responsible for on-going system operations.

Maintenance services are grouped according to the major functions detailed in Figure 5-6: Remote Services, Performance Support and On-Site Services, which may be purchased during and beyond the initial switch warranty period or as part of an ESP contract.

```
Remote services

From a specially designed Remote Service Center, experienced personnel monitor switching activity around the clock, every day of the year. Remote Services includes Remote Surveillance and Remote Maintenance.

Figure 5-7

Two options of remote services
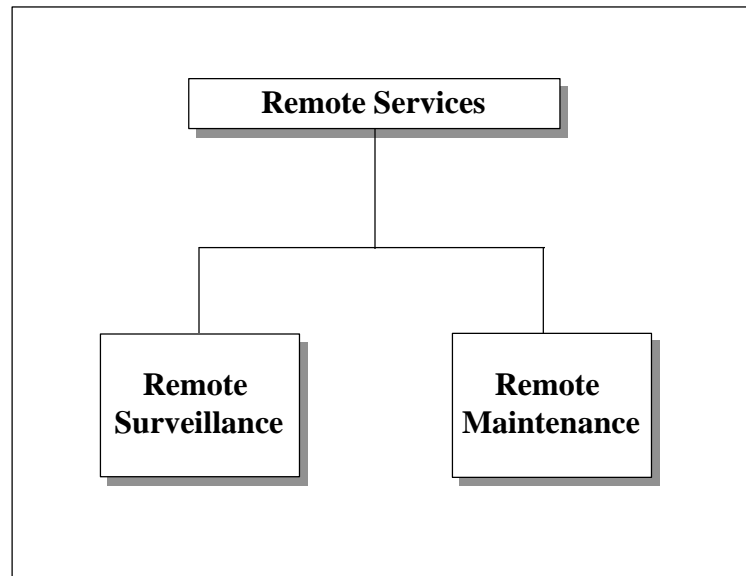

Remote Surveillance

Remote surveillance monitors critical or service affecting indicators on Nortel Networks systems from the Remote Service Center. Immediate response to alarms keeps distributors informed of any potential problems before they become major performance issues. Remote Surveillance dispatches designated on-call technicians for corrective action when necessary, monitoring progress throughout the trouble-clearing process. (As an additional service, distributors can request that Nortel Networks provide on-call technicians.)

Remote Surveillance features include:

- customized alarm system verified in the first month of service ensures all critical areas monitored

- regular communication link verification and network sanity check

- twenty-four hour monitoring of pre-established alarms

- pre-business day check makes sure the day starts off right

Administration functions are further augmented by a monthly report on remote surveillance activity. The report covers trouble tickets and corrective maintenance performed, and the status of Customer Service Reports (CSR).

Remote Maintenance

Remote Maintenance includes all features and benefits delivered by the other remote service (Remote Surveillance), adding important corrective and preventive remote controls. First, service-affecting conditions are not only detected; action is taken to see they are corrected. A single point of contact is appointed to track and report troubles, supplying assistance and corrective action to both distributor and technicians throughout the escalation-resolution process.

Remote Maintenance also uses preventive system software tools (Switch Performance Monitoring System (SPMS), focused maintenance for trunks, operational measurement thresholds, and Network integrity analysis). When necessary, designated on-call technicians will be dispatched for routine and preventive maintenance and hardware or software changes. Finally, remote maintenance will set up and control various controls and administrative logs.

Access to the system is controlled via security modem using a password for preprogrammed dialback. Call-out procedures will be initiated as necessary. As an additional service, distributors can request that Nortel Networks provide technicians to support the call-out requirement.

Performance support

Business expects a communication system to do more than just work. It must perform. Performance of a system depends largely on how well it is maintained. Nortel Networks offers complementary services that provide distinct paths leading to peak performance.

Translation support

Preparing the database and routing selection is a vital step in achieving and maintaining peak performance of switching systems. Translation support involves having Nortel Networks personnel optimize the system database so that the configuration provides efficient traffic routing and utilization of features and facilities. This service also offers assistance with new software features and rerouting of specific traffic (for example, call blocked at peak traffic hours despite ample trunking facilities).

Translation support and feature implementation include the following features:

- redesign of dial plan

- routing changes

- evaluation of present services

- MACs (moves, adds, changes) Servord

- redesign of console positions

On-site services

Distributors can make it our business to support all their business information systems. Nortel Networks On-Site Services provides on-site support based on customer-defined requirements and time intervals. With resources available in over 100 cites, 24 hours a day, 365 days a year, On-Site Services supply the short- or long-term expertise to cover unusual or unplanned situations and to fill specialized needs. Trained and experienced Nortel Networks On-Site Service Representatives are resources that complement the knowledge of the existing maintenance staff, as both business systems advisors and service engineers.

Figure 5-8

On-site services organization
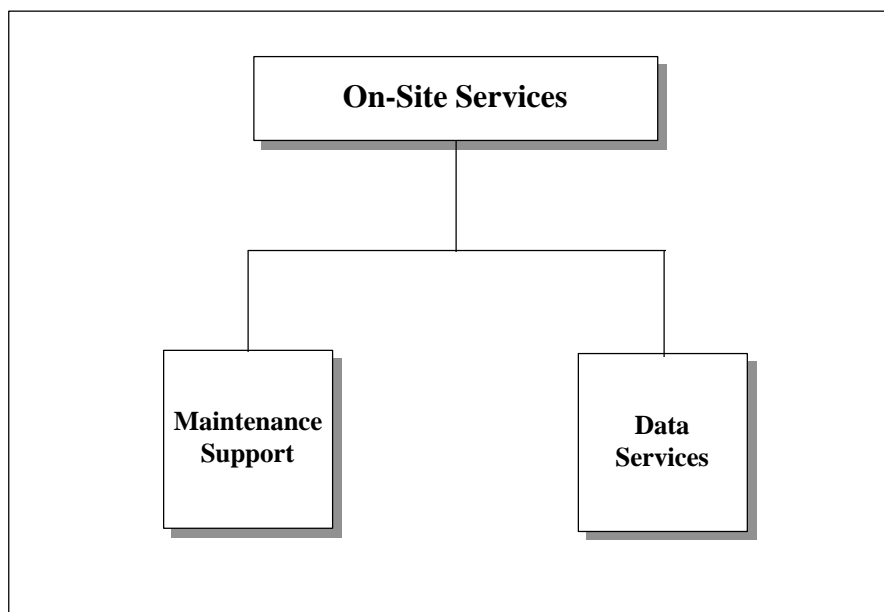

Note: Data Services pricing in covered in a separate price manual. Its description is included here for information purposes.

Maintenance Support

Maintenance Support service offers qualified operational personnel for a variety of technical support activities and information ranging from preventive maintenance tasks to performance measurement.

Maintenance Support is available on a daily, weekly or monthly basis. It provides technical support to keep the unexpected from disrupting service, by allowing distributors to effectively manage costs and adapt to changing

workloads. Maintenance Support service offers a wide range of activities: preventive and corrective maintenance activities, administrative activities, implementation of new features/products, and assistance and training in system test tools.

Data services

Data Services provides fields service representatives trained to service data processing and telecommunications systems, office automation products, local and wide-area networks, and personal computers. A single, toll-free call to our National Dispatch Center—open 24 hours a day, 365 days a year—-brings a Nortel Networks field service representative to the end users site.

Data Services assures end users of prompt and complete service, not only on equipment produced by Nortel Networks, but on compatible equipment purchased through other companies—including service of all major personal computers.

Among the Nortel Networks products serviced: Norstar and Vantage Key systems, Enhanced Operator Service, and Data Packet Network (DPN) Packet Switches.

In addition, Nortel Networks Data Services personnel are authorized repair vendors for the following telecommunications and data processing manufacturers: DEC, Apple, HP, Compaq, Epson, Hayes, Novell...and more.

Maintenance support services price list

The following tables include 1999 net distributor prices.

Table 5-5a

Remote services:

Duration	Net Distributor Price

Remote Surveillance
(with monitoring equipment)
     Annual
     6 Months
     1 Month
	$50,000.00
	$26,250.00
	$6,600.00

Remote Maintenance
(with monitoring equipment)
     Annual
     6 Months
     1 Month
	$110,800.00
	$63,000.00
	$15,750.00

Table 5-5b
Performance support

Service	Net Distributor Price
Translation support per hour (Note 1)	$195.00

Note 1: Excludes actual travel and living expenses, if required.

Table 5-5c

Field services

Duration	Net Distributor Price
Field Support	**(Note 1)**
6 months	$113,500.00
1 months	$21,200.00
1 week	$5,450.00
1 day	$1,100.00
Per hour (normal business hours)	$137.50
Per hour (outside normal business hours)	$206.25
Per hour (Sunday or Nortel Networks-scheduled holidays)	$275.00
Data Services	(Note 2)

Note 1: Excludes actual travel and living expenses when required.

Note 2: Pricing for data services are quoted in the Data Services Price Manual.

This page was intentionally left blank.

Post-Warranty, Non-ESP Policy

Policy

Post-warranty distributor sites which decline an ESP contract may receive services on a pay as you play basis. A "Not-to-exceed/Open" purchase order may be issued to cover such expenses.

Pricing

Repair/replacement (PCP/Station Equipment Maintenance)

Type	Description
Routine	Standard list repair price per unit.
Emergency	Standard list repair price per unit plus $50 per order emergency service charge.

Technical Assistance Service (TAS) rates

The following are the current charges for Nortel Networks technical assistance (subject to contractual agreements).

Type	Time of service	Cost (per hour, per query, one hour minimum)
Standard rate	During normal business hours 8:00 AM–5:00 PM, Central Time, Monday through Friday	$300
Overtime rate I	Provided outside normal business hours	$450
Overtime rate II	Provided on Sunday or Nortel Networks scheduled holidays	$600

Note: Each Customer Service Report (CSR) will be assessed with a minimum of one (1) TAS hour.

Design change support - hardware

Class A Design Change Applications (DCA's) which require backplane wiring changes are performed by Nortel Networks and provided at no extra cost to the distributor. Class A DCA's which requires on-site pack swap-out will have the packs supplied by Nortel Networks with the swap-out performed by distributor/site personnel. Distributors who request Nortel Networks on-site support for pack swap-out of non-class A DCA implementation are billable at the rate of $160 per hour, plus actual Travel and Living Expenses.

Design change support - software

Stand-alone MSL upgrade (non-ESP)

Stand-alone MSL upgrade (non-ESP) sites are maintained on a 28-day schedule for the duration of the software warranty period to receive released PRSUs. Software related technical assistance (TAS) during the software warranty period is covered as part of the software warranty, except as specified in the Service Billing Guidelines.

Beyond software warranty

Out of Warranty and Non-ESP sites are removed from the 28-day schedule. Software related technical assistance (TAS) beyond the software warranty period is billable at the then current TAS rates. PRSUs (if available per support category) are applied as part of Customer Service Report (CSR) resolution.

OEM equipment support

Service provided on a per unit basis. Standard list repair price (see Repair/Replacement Section) represents depot level repair/replacement. Requests for on-site repair will be performed on a time and material basis at the then current rates plus actual travel and living expenses plus a 30% service charge per service request.

Circuit pack repair/replacement

Nortel Networks' Repair and Replacement service provides timely and efficient service for units during (and beyond) the warranty period—in routine and emergency situations. In emergency situations, necessary replacements are shipped from Nortel Networks within 24 hours. Routine like-for-like replacements have a target turnaround of 3 days for failed hardware assemblies, printed circuit packs and similar hardware.

DMS family circuit pack type replacement

Card	Cost
NT2X17AB/AC/AD	$63.00
NT2X18AD/AE	$63.00
NT6X17AA/AB/AC	$63.00
NT6X18AA/AB	$63.00
NT6X19AA	$63.00
NT6X20AA	$63.00
NT6X21AA/AB/AC	$63.00
NT6X71AA	$63.00
NT6X76AA AILC	$63.00

The increased complexity of many DMS circuit packs has resulted in a repair process that is also more complex and time consuming. As a result, we have provided our Repair Pricing structure in order to more accurately reflect the current repair process. The following chart lists the new pricing for circuit pack repairs.

Table 5-6

1999 DMS circuit pack repair pricing

Circuit pack CLP	CLP repair price
< - $250	$65
$251 - 500	$195
$501 - 1000	$315
$1,001 - 2,500	$470
$2,501 - 5,000	$625
$5,001 - 7,000	$780
$7,001 - 9,000	$940
$9,001 - 11,000	$1,095
$11,001 - 13,000	$1,250
$13,001 - 15,000	$1,405
$15,001 - 20,000	$1,560
$20,001 - 30,000	$1,720
$30,001 - >	$1,875

Requested circuit pack upgrade during repair:

Prices Charged for upgrade during repair cycle for returns will be dependent upon degree of upgrade effort and parts involved. Available upon request only.

Table 5-7

IPE repair pricing

Description	PEC	CLP
PE Power Supply - DC	NT6D40AA/AB	$650.00

OEM equipment repair/replacement

Standard list repair price (see chart below) represents depot level repair/ replacement. Requests for on-site repair will be performed on a time and material basis at the then current rates plus actual travel and living expenses plus a 30% service charge per service request.

In warranty
- routine service - no charge

- emergency service - $50 expedite fee per order

Out of warranty
- routine service: depot level (mail-in) repair price as listed below

- emergency service: parts, labor, vendor service charge, all transportation charges (if applicable) and a 30% handling charge, plus a $50.00 expedite fee

The following is a list of common OEM part numbers and their repair prices.

Table 5-9

Description	PEC#	Repair Price
DPO w/Ext. Range	QPP354E1	$178.00
Channel Unit 4-W E&M	QPP537A	141.00
Trans/Receive Unit	QPP555A	299.00
Channel Unit 4-W SF/FX	QPP601A1	234.00
Office Repeater	QRY18B1	169.00

Billing recovery

Lost billing data means lost revenue to MSL-100 system operators. In response to this, Nortel Networks has developed the AMA Recovery service which can potentially reduce or prevent such loses due to disk drive corruption.

If technical assistance is required to determine if billing data corruption has occurred, Nortel Networks TAS should be contacted. If AMA recovery is required, the call will be transferred to Customer Service to initiate the AMA recovery service.

If the need for AMA recovery is previously determined, Customer Service may be contacted directly.

The requester is issued an order ID# and is instructed to return the damaged disk drive to Nortel Networks Customer Service. Once received by Customer Service, the disk drive is attached to a captive office and a proprietary recovery application is administered. If successful, the recovered records are captured to magnetic tape and returned to the requester.

The typical turn around time is two days, however this may vary, depending on the severity of the corruption and the number of records to be recovered. Due to the varying degrees of corruption, Nortel Networks does not in any way guarantee that full or partial recovery will be successful.

AMA recovery is available at no charge for sites within the original switch warranty period and for those disk drives specified within a current ESP. The billable rates for this service are as follows:

$500.00 inspection charge
(whether recovery is successful or not)
+ $0.50 per data record recovered
+ Current disk drive repair price

For additional information, please call Nortel Networks Customer Service at (972) 684-7888.

Nortel Networks Acronyms

Acronym	Definition
AAB	Auto Answer Back
ABSCH	Average Busy Season/Busy Hour
AC	Attendant Console
ACD	Automatic Call Distribution
ACD MIS	ACD Management Information System
ACM	Address Complete Message
ACOR	Automatic Out-of-Chain Routing
ACT	Advanced Communication Terminal
ACTQ	Attendant Console Trunk Queuing
AILC	Asynchronous Interface Line Card
AILU	Asynchronous Interface Line Unit
AIM	Asynchronous Interface Module
ALT	Automatic Line Test
ALU	Arithmetic and Logic Unit
AMA	Automatic Message Accounting
AMI	Automatic Modem Insertion
AMP	Adjusted Market Price
ANI	Automatic Number Identification
ANM	Answer Message
ARS	Automatic Route Selection
ASCII	American Standard Code for Information Interchange
AT	Access Tandem
AT&T	American Telephone and Telegraph Company
ATCP	Automatic Traffic Control Plan
ATD	Audio Tone Detector
ATT	Automatic Trunk Test
AUD	Automatic Dial
AUL	Automatic Line
BCS	Batch Change Supplement
BERT	Bit Error Rate Tester
BNM	Business Network Management
BNR	Bell Northern Research

Acronym	Definition
BOC	Bell Operating Company
BPA	Blocked Precedence Announcement
BRA	Basic Rate Access
BRI	Basic Rate Interface
BVL	Busy Verify Line
C7TU	Common Channel Signaling Number 7 Test Utility
CAMA	Centralized Automatic Message Accounting
CBB	Channel Bank Bay
CBQ	Call Back Queuing
CC	Central Control
CCB	Call Condense Block
CCC	Central Control Complex
CCIS	Common Channel Inter-office Signaling
CCITT	International Telegraph and Telephone Consultative Committee
CCS7	Common Channel Signaling Number 7
CCSA	Common Control Switching Arrangement
CCW	Cancel Call Waiting
CDB	Call Data Block
CDR	Call Detail Recording
CESU	Coax Elimination and Switching Unit
CFB	Call Forward Busy
CFD	Call Forward Don't Answer
CFF	Call Forward Fix
CFF	Call Forwarding Fix
CFI	Call Forward Intragroup
CFK	Call Forward Universal Per Key
CFK	Call Forwarding Universal Per Key
CFRA	Call Forward Remote Access
CFRA	Call Forwarding Remote Access
CFU	Call Forward Universal
CI	Command Interpreter
CIC	Circuit Identification Code
CLF	Call Line Identification with Flash
CLID	Calling Line Identification

Acronym	Definition
CLLI	Common Language Location Identifier
CLP	Commercial List Price
CMC	Central Message Controller
CO	Central Office
COI	Communities of Interest
CONUS	Continental U.S. (United States)
COS	Class Of Service
CP	Call Processing
CP	Circuit Pack
CPE	Customer Premise Equipment
CPG	Call Progress Message
CPG	Computer Port Groups
CPI	Computer to PBX Interface
CPM	Central Processing Unit and Memory (Shelf)
CPU	Central Processing Unit
CRR	Call Request Retrieval
CRS	Code Route Substitution
CSC	Customer Service Change
CSR	Customer Service Report
CSU	Channel Service Unit
CUG	Closed User Group
CVT	Circuit Validation Test
CWD	Dial Call Waiting
CWO	Call Waiting Originate
CWT	Call Waiting
CXR	Call Transfer
DAT	Direct Access Trunk
DC	Device Controller
DCBI	Directed Call Pickup – Barge–In
DCE	Digital Communication Equipment
DCM	Digital Carrier Module
DCPK	Directed Call Park
DCS	Data Communications Systems
DDD	Direct Distance Dialing

Acronym	Definition
DDN	Defense Data Network
DDP	Distributed Data Processing
DDS	Dedicated Digital Service
DDU	Disk Drive Unit
DFMS	Digital Facility Management System
DFS	Dual Function Switch
DFSU	Dual Frequency Signaling Units
DID	Direct Inward Dialing
DIRP	Device Independent Recording Package
DISA	Direct Inward System Access
DLC	Data Line Card
DLH	Distributed Line Hunt
DLM	Digital Line Module
DMC	Digit Manipulation Command
DMI	Digit Manipulation Index
DMO	Data Modification Order
DMS	Digital Multiplex System
DN	Directory Number
DNC	Network Controller
DND	Do Not Disturb
DNG	Dynamic Network Gateway
DNH	Directory Number Hunt
DNI	Digital Network Interface (frame)
DNPC	Dual Network Packaged Core
DNX	Network Cross-connects
DOC	Dynamic Overload Control
DOD	Direct Outward Dialing
DOR	Denied Origination
DP	Dial Pulse
DPCC	Dual Plane Combined Core
DPN	Digital Packet Network
DRAM	Digital Recorded Announcement Module
DRE	Directional Reservation of Equipment
DS	Data Store

Acronym	Definition
DS-1	24-channel, 1.544 Mbps multiplexed carrier system link
DS-30	32-channel speech & message link to connect Meridian SL-100 nodes
DS-30A	32-channel speech link to connect LCM to controller. Similar to
DS-30A	DS-30, except that DS-30A is usually used for shorter distances
DSI	Digital Carrier System (24 Channels at 1,544 Mbps)
DSN	Defense Switched Network
DSN	Dual Shelf Network
DSP	Down Stream Processor
DSR	Data Set Ready
DSX1	Digital Signal Cross-Connect (T-1 Interface)
DTC	Digital Trunk Controller
DTE	Data Terminal Equipment
DTMF	Dual Tone Multifrequency
DTR	Data Terminal Ready
DU	Data Unit
DVS	Data Voice System
E-CORE	Enhanced Core Central Processing Unit
E-Mail	Electronic Mail
EAEO	Equal Access End Office
EBO	Executive Busy Override
EBS	Electronic Business Set
ELCM	Enhanced Line Concentrating Module
EMAP	Enahanced MAP
EMI	Electromagnetic Interference
EMPC	Enhanced Multi Protocol Controller
ENET	Enhanced Network
EPSCS	Enhanced Private Switched Communication Service
EPSCS	Enhanced Private Switched Communications System
ERWT	Expensive Route Warning Tone
ESA	Emergency Stand Alone
ESN	Electronic Switched Network
ETAS	Engineering Technical Assistance System
ETN	Electronic Tandem Network

Acronym	Definition
ETS	Electronic Telephone Set
FAST	First Application System Testing
FAX	Facsimile
FGA	Feature Group–A
FGB	Feature Group–B
FGD	Feature Group–D
FM	Force Manangement
FO	Flash Override
FSP	Frame Supervisory Panel
FTS	Federal Telecommunication System
FX	Foreign Exchange
GIC	Group Intercom
GVGB	Global Virtual Group Busy
HSDU	High Speed Data Unit
I/F	Interface
I/O	Input/Output
IAC	ISDN Access Controllers
IAM	Initial Address Message
IBERT	Integrated Bit Error Rate Test
IBL	Individual Business Lines
IBM	Individual Business Line
IBN	Integrated Business Network
ICI	Incoming Call Identification
IDS	Interactive Directory System
IDTC	International Digital Trunk Controller
IEC	Inter-Exchange Carriers
ILGC	International Line Group Controller
IMP	Inbound Modem Pooling
INF	Information Message
INID	Immediate Network Inward Dialing
IOC	Input/Output Controller
IOD	Input/Output Device
IOS	Integrated Office Systems
IP	Internet Protocol

Acronym	Definition
IPE	Intelligent Peripheral Equipment
IPML	Inter Peripheral Message Link
ISDN	Integrated Services Digital Network
ISN	Integrated Services Network
ISU	Incremental Software Unit
ISUP	ISDN User-Part
IVD	Integrated Voice and Data
IVDLC	Integrated Voice and Data Line Card
JF	Journal File
KSH	Key Short Hunt
KT	Killer Trunk
LAMA	Local Automatic Message Accounting
LAN	Local Area Network
LANSTAR	Meridian Data Products
LCC	Line Control Card
LCD	Liquid Crystal Display
LCE	Line Concentrating Equipment
LCM	Line Concentrating Module
LD	Line Drawer
LDN	Listed Directory Number
LDS	LANSTAR Data Services
LDU	Low Speed Data Unit
LE	Local Exchange
LEC	Local Exchange Carrier
LEN	Line Equipment Number
LGC	Line Group Controller
LPA	Loudspeaker Paging Answerback
LSC	Line Screening Codes
LTC	Line Trunk Controller
LTP	Line Test Position
LTU	Line Test Unit
MADN	Multiple Appearance Directory Number
MADO	Meridian Asynchronous Data Option
MAP	Maintenance and Administration Position

Acronym	Definition
MBC	Meridian Bandwidth Controller
MC	Machine Congestion
MC7M	Meridian Cabinet CCS7 Module
MCA	Multiple Call Arrangement
MCAM	Meridian Cabinet Auxiliary Module
MCBM	Meridian Cabinet Basic Module
MCCM	Meridian Cabinet Core Module
MCDM	Meridian Cabinet Digital Module
MCDN	Meridian Customer Defined Networking
MCDR	Meridian Cabinet Digital Remote
MCDR	Military Call Detail Recording
MCEM	Meridian Cabinet E-Core Module
MCGM	Meridian Cabinet General Module
MCH	Malicious Call Hold
MCHM	Meridian Cabinet Half Module
MCLM	Meridian Cabinet Line Module
MCMM	Meridian Cabinet Memory Module
MCNM	Meridian Cabinet Network Module
MCPM	Meridian Cabinet Power Module
MCRM	Meridian Cabinet Remote Module
MCRU	Meridian Cabinet Remote Unit
MCSM	Meridian Cabinet Service Module
MCSS	Meridian Cabinet Spares Storage
MCTM	Meridian Cabinet Trunk Module
MDC	Message and I/O Device Controller (shelf)
MDF	Main Distribution Frame
MDS	Modular Documentation System
MDU	Meridian Data Unit
MEB	Mate Exchange Bus
MER	Most Economical Routing
MEX	Memory Extension (frame)
MF	Multifrequency
MIS	Management Information System
MIS	Miscellaneous Equipment (frame)
MLH	Multiline Hunt

Acronym	Definition
MMI	Man Machine Interface
MMT	Meridian Modular Telephone
MNC	Meridian Network Control
MNS	Meridian Network Systems
MOH	Music On Hold
MONA	Meridian Offnet Access
MOS	Metallic Oxide Semiconductor
MPAL	Military PBX Access Line
MPC	Multi–Protocol Controller
MPDA	Meridian Programmable Data Adapter
MPDC	Meridian Power Distribution Center
MS	Message System
MSB	Make Set Busy
MSB	Message Switch Buffer
MSM	Message Services Module
MSN	Meridian SuperNode
MSS	Maintenance Spares Storage
MTBF	Mean Time Before Failure
MTC	Magnetic Tape Center
MTD	Magnetic Tape Drive
MTM	Maintenance Trunk Module
MTS	Multi-Tenant Service
MTTR	Mean Time To Repair
MVP	Multiline Variety Package
MW	Megaword
NACD	Networked Automatic Call Distribution
NAS	Network Attendant Services
NC	Network Connections
NCOS	Network Class of Service
NCP	Network Control Point
NCRT	No–Circuit Route Treatment
NDC	No Double Connect
NEM	Network Element Manager
NET	Network
NETC	Network, Combined (frame)

Acronym	Definition
NM	Network Module
NMC	Network Message Controller
NMP	Network Management Protocol
NND	Network Name Display
NNI	Network-to-Network Interface
NODE/1	Network Optimization Design and Engineering Nodes
NOP	Network Operations Protocol
NPA	Numbering Plan Area
NPDA	Network Program Determination Application
NRAG	Network Ring Again
NRS	Network Resource Selector
NSC	Network Speed Calling
NSS	Network Services Software
NT	Northern Telecom/Nortel
NTC	Northern Telecom Canada Limited
NTFC	Northern Telecom Finance Corporation
NTI	Northern Telecom Incorporated
NTL	Northern Telecom Limited
NTP	Nortel Networks Publication
NWM	Network Management
OA&M	Operations, Administration and Maintenance
OCC	Other Common Carriers
OCONUS	Outside Continental U.S. (United States)
OHQ	Off–Hook Queuing
OM	Operational Measurements
OMA	Operations, Maintenance, Administrative Protocol
OMP	Outbound Modem Pooling
ONA	Open Networks Architecture
ONC	Operator Network Center
ONP	One Night Process
OPEN	Open Protocol Enhanced Network
OPX	Off-Premises Extension
OS	Out of Service
OSAP	Operator Services Application Processor

Acronym	Definition
OSI	Open Systems Interconnect
PAD	Packet Assembler/Disassembler
PAL	PBX Access Lines
PAM	Pass Along Message
PAT	Precedence Access Threshold
PBX	Private Branch Exchange
PC	Personal Computer
PC	Preset Conference
PCAM	Packaged Core Auxiliary Module
PCGM	Packaged Core General Module
PCLM	Packaged Core Line Module
PCM	Pulse Code Modulation
PCMM	Packaged Core Memory Module
PCNM	Packaged Core Network Module
PCPM	Packaged Core Power Module
PCSM	Packaged Core Service Module
PCTM	Packaged Core Trunk Module
PCWT	Precedence Call Wait Terminating
PCXM	Packaged Core Expansion Module
PDC	Power Distribution Center
PDN	Prime Directory Number
PDP	Power Distribution Panel
PDTC	PCM–30 Digital Trunk Controller
PEC	Product Engineering Code
PIN	Personal Identification Number
PLP	Plug Up
PM	Peripheral Module
PMI	Precedence Manual Incoming
POF	Pending Order File
POP	Performance Oriented Practices
POP	Point of Presence
POTS	Plain Old Telephone Service
PP	Peripheral Processor
PRA	Primary Rate Access
PRI	Primary Rate Interface

Acronym	Definition
PRK	Call Park
PROTEL	Procedure Oriented Enforcing Language
PS	Program Store
PTM	Packaged Trunk Module
PTN	Public Telephone Network
PTS	Per Trunk Signaling
QBS	Query Busy Status
RAG	Ring Again
RAM	Random Access Memory
RASL	Robust Application and Session Layer
RBOC	Regional Bell Operating Company
RC	Route Control
RCC	Remote Cluster Controller
RDLM	Remote Digital Line Module
RDOC	Receiver Dynamic Overload Controls
REL	Release Message
RLC	ReLease Complete Message
RLC	Remote Line Controller
RLCM	Remote Line Concentrating Module
RLT	Release Link Trunk
RMI	Routine Manual Incoming
RMM	Remote Maintenance Module
ROM	Read-Only Memory
ROTL	Remote Office Test Line
RSC	Remote Switching Center
RSUS	Requested Suspended Service
RTS	Return to Service
SAS	Service Analysis System
SBA	Single Bridged Arrangement
SCA	Single Call Arrangement
SCAI	Switch Computer Applications Interface
SCCP	Signaling Connection Control Part (2nd layer of SS#7)
SD	Signal Distribution
SDLC	Synchronous Data Link Control

Acronym	Definition
SDN	Secondary Directory Number
SDN	Software Defined Network
SL	Stored Logic
SLC	Speech Link Connecting (frame)
SLM	System Load Module
SMDI	Simplified Message Desk Interface
SMDR	Station Message Detail Record
SMS	Service Management System
SNA	Systems Network Architecture
SNPA	Serving Numbering Plan Area
SOS	Support Operating System
SRCF	Sub-Regional Control Facility
SS7	Signaling System #7
SSAC	Station Specific Authorization Code
ST	Signaling Terminal
STM	Service Trunk Module
STP	Signal Transfer Point
SVC	Switched Virtual Circuit
SWACT	Software Activity Switch
TAA	Terminating Alternate Addressing
TADO	Touch Asynchronous Data Option
TAFAS	Trunk Answer From Any Station
TASC	Telemanagement Applications Support Center
TCAP	Transaction Capabilities Application Part
TCM	Time Compression Multiplexing
TCN	Travel Card Number
TEMS	Telecommunications Equipment Management System
TGAR	Trunk Group Access Restriction
TLT	Test Line Tests
TOD	Time of Day
TRAMS	Trouble Reporting and Management System
TS	Time Switch
TSMS	Traffic Separation Measurement System
TTP	Trunk Test Position

Acronym	Definition
TTT	Transmission Test Trunk
TTTN	Tandem Tie Trunk Network
TTU	Transmission Test Unit
TTY	Teletype
TVDS	Trunk Verification from Designated Station
UA	Universal Access
UCD	Universal Call Distribution
UTR	Universal Tone Receiver
VAC	Virtual Facility Group Access Control
VDU	Virtual Display Unit
VFG	Virtual Facility Group
VPP	Volume Purchase Plan
VMX	Voice Message Exchange
WATS	Wide Area Telephone Service
WC	Wild Card
XPM	Extend Peripheral Memory
ZR	Zone Restrictions
3WC	Three Way Calling
